Wire Rope Assembly & Fittings

Boom Penants/Spelter Sockets

General Guide to Boom Pendant Inspection

1. Measure the diameter of the rope at several points along the pendant especially near the end fittings.
 - Measurements below the ropes nominal diameter may mean that the core is deteriorating, even if the outside wires and strands appear to be in good condition.
2. Inspect the outside wires and strands for damaging rust or abrasive wear caused by loss of lubrication or by the rope's contact with the boom or other structures on the crane.
3. Inspect the rope for broken wires—especially near the end fittings.
 - Even one broken wire near an end fitting may be a sign that the rope is deteriorating and may be near failure.
 - Any "valley breaks," that is, wires that have broken in the valley between two strands may also be a sign that there is serious vibration fatigue in the core.
4. Inspect the fitting attachments.

Watch for broken wires in this area.

The socket must be replaced.

- Flemish Eye Swaged:** Look for any sign that the sleeve may be cracked, crushed or peeling back.
- Swaged Sockets:** Look for any signs of a cracked or bent shank. Look for any sign that the rope may be pulling out of the socket.
5. Inspect the End Fittings: Inspect the fittings for any signs of cracking or distortion. Pay particular attention to the area around the pin holes and along the ears of open sockets.
 - Inspect the pin holes for any signs of elongation or excessive wear.
 - Inspect the socket pins for any signs of bending or excessive wear.

Note: If any of the above conditions exist, the pendant should be removed from service and inspected or tested further. This is intended to be a general guide only. Contact the manufacturer of the equipment. The pendants, and/or the end fittings to get specific retirement criteria.

3 Wire Rope Assembly and Fittings

Poured Zinc or Thermo-Set Resin Sockets: Look at the base of the sockets for any signs that the wires may be pulling out of the zinc or thermo-set resin. Look at the top of the cone for any sign that the zinc or thermo-set resin is cracked or is chipping or flaking off.

Boom Pendant Thimbles

The BOOM PENDANT is fabricated with a flemish eye splice and swaged steel sleeves which fit around a pendant fitting that is either open or closed. Available in sizes from 9/16" to 2-1/8".

Pendants are not to be used for any other purpose other than BOOM PENDANT application. PENDANT THIMBLES are interchangeable with standard sockets. Weight on open pendant includes pin (D) and cotter.

Spelter Socket Assemblies

Wire Rope assemblies with fittings permanently attached at ends are custom fabricated for use as boom pendants, guylines, raising lines, backstays, lifting bridle, etc. These are offered in both poured, or spelter, sockets and mechanically swaged sockets. A Design Factor of five is applied in establishing Rated Capacities shown.

Molten zinc is standard as the bonding medium surrounding wires inside the socket, but epoxy compound may be specified on special order. Both mediums have same capacity ratings. Steel forgings are used for rope sizes 1/2" through 1-1/2" and cast steel fittings for larger sizes. Larger than 4" available on special order. Assembly length is measured from centerline of pin for open sockets and bearing point for closed sockets.

Wire Rope Assembly & Fittings

Spelter Sockets

Grooved Open Spelter Socket

G-416 Crosby

Note: Above drawing illustrates one groove used on sockets 1/4" thru 3/4". Sizes 7/8" thru 1-1/2" use 2 grooves. Sizes 1-5/8" & larger use 3 grooves.

- Forged Steel Sockets thru 1-1/2", cast alloy steel 1-5/8" thru 4".
- Spelter socket terminations have an efficiency rating of 100%, based on the catalog strength of wire rope. Ratings are based on recommended use with 6 x 7,

6 x 19, or 6 x 37, IPS or XIP (EIP), XXIP (EEIP), RRL, FC, or IWRC wire rope.

- Notice: All cast steel sockets 1-5/8" & larger are magnetic particle inspected & ultrasonic inspected. Proof testing available on special order.

Resin for Spelter Sockets - Wirelock® W416-7

Socket Compound

- 100% termination efficiency.
- Temperature operating range is -65° F to +240° F.
- Ideal for on site applications.
- No hazardous molten metal.
- Improved fatigue life.
- Pouring temperature without booster pack is 48° F to 110° F.
- One booster pack if pouring temperature is 35° F to 48° F.
- Two booster packs if pouring temperature is 27° F to 35° F.
- Refer to Wirelock® Technical Manual for more information.

Note: For use on 416 & 417 Spelter Sockets Only.

Wire Rope Assembly & Fittings

Swaged Sockets

Swaged Sockets Assemblies

Indicate choice of end fittings on purchase orders by the suffixes "OS" or "CS" after the stock number, for open or closed type fittings. Pins and cotters are supplied as standard on open fittings, but assemblies may be specified without pins. Fittings will be assembled in the same plane unless specified otherwise on the order.

In mechanically swaged fittings, high pressure presses and precision dies cause metal of the socket to flow around wires and strands to offer the ultimate in compactness and strength with minimum weight. Material is weldless, drop-forged steel. Normally, only regular lay rope is used. Swaged assemblies are interchangeable with poured sockets up through 2" rope diameters. Assembly length is measured from centerline of pins for both open and closed sockets.

* These sockets are not interchangeable with zinc poured sockets.

3 Wire Rope Assembly and Fittings

Open Swage Sockets S-501 Crosby

- Forged from special bar quality carbon steel, suitable for cold forming.
- Hardness controlled by spheroidize annealing.
- Swage Socket terminations have an efficiency rating of 100% based on the catalog strength of wire rope.
- Stamp for identification after swaging without concern for fractures (as per directions in National Swaging Brochure).

Maximum Proof Load shall not exceed 40% of XXIP rope catalog breaking strength.

NOTE: S-501 Swage Sockets are recommended for use with 6 x 19 or 6 x 37, IPS or XIP (EIP), XXIP (EEIP), RRL, FC or IWRC wire rope.

In accordance with ANSI B30.9, all slings terminated with swage sockets shall be proof loaded.*

Closed Swage Sockets S-502 Crosby

- Forged from special bar quality carbon steel, suitable for cold forming.
- Hardness controlled by spheroidize annealing.
- Swage Socket terminations have an efficiency rating of 100% based on the catalog strength of wire rope.
- Stamp for identification after swaging without concern for fractures (as per directions in National Swaging Brochure).

You can use the Tuf-Grip SW-704 Jaw two ways. One, with the Tuf-Grip SW-703 Pineye when you

need multiple lengths of assemblies. And two, for single lug attachment of a wire rope assembly.

Our Jaw offers excellent pin bearing surface for your applications. You can also depend on long life with its rugged, one-piece, drop-forged steel construction. Measure the length of the assembly from the center of the pin.

We supply the Tuf-Grip Jaw without a pin or a nut and bolt but we can provide either if you specify on your order.

24	3/4	3-5/8	1-7/16	1-1/2	1-1/4	8-1/2

Ideal for clevis-type attachments. The Tuf-Grip SW-703 gives you a large pin bearing area with a durable, weldless, drop-forged steel construction. Measure the length of the assembly from the center of the pin hole.

You may specify a custom-made pin hole diameter if you wish. We can make these pineye assemblies to your custom dimensions which can be fully machined to your specific application. Please contact us with your special requirements.

Tuf-Grip large ring eyes offer many advantages for hanger-type applications. They feature a large eye opening to make attachment easy and provide a large internal bearing surface. They're made of one-piece, drop-forged steel construction. To measure the assembly length, use the distance from the bearing of the eye to the appropriate point at the other end of the assembly.

Swaged Fittings

Oval Eye SW-707

For hanger-type applications that require smaller diameter pins and a narrower profile than large ring eyes, the Tuf-Grip SW-707 Oval Eye is your best choice. These are made with one-piece, drop-forged steel for dependable service. Measure the length from the bearing of the eye.

Swage Fittings

"Cold Tuff" Button S-409

- Special processed, low carbon steel.
- "Cold Tuff" for better swageability.
- Swage Button terminations have an efficiency rating of 98% based on the catalog strength of wire rope.
- Stamp for identification after swaging without concern for fractures (as per directions in National Swaging Brochure).

NOTE: S-409 Buttons are recommended for use with 6 x 19 or 6 x 37, IPS or XIP (EIP), RRL, FC or IWRC wire rope.

Wire Rope Assembly & Fittings

Wedge Sockets

The "Terminator" Crosby's "New & Improved" Wedge Socket

US patent 5,553,360 and foreign equivalents.

- Basket is cast steel.
- Individually magnetic particle inspected.
- Pin diameter and jaw opening allows wedge and socket to be used in conjunction with open swage & spelter sockets.
- Secures the tail or "dead end" of the wire rope to the wedge, thus eliminates loss or "Punch out" of the wedge.
- Eliminates the need for an extra piece of rope, and is easily installed.
- The "TERMINATOR™" wedge eliminates the potential breaking off of the tail due to fatigue.
- The tail, which is secured by the base of the clip and the wedge, is left undeformed and available for reuse.
- Incorporates Crosby's patented QUIC-CHECK™ "Go" and "No-Go" feature cast into the wedge. The proper size rope is determined when the following criteria are met:

1. The wire rope should pass thru the "Go" hole in the wedge.
 2. The wire rope should NOT pass thru the "No-Go" hole in the wedge.
- Utilizes standard Crosby Red-U-Bolt wire rope clip.
 - Generates a minimum efficiency of 80% based on the catalog breaking strength of the wire rope.
 - Standard S-421 wedge socket can be retrofitted with the new style "TERMINATOR™" wedge.
 - Available with Bolt, Nut, and Cotter Pin.

* Terminator Assembly includes Socket, Wedge, Pin, and Wire Rope Clip.

** 1-1/4" not available in TERMINATOR™ style.

† Nominal

‡ For intermediate wire rope sizes use next larger size socket.

Wedge Sockets: Important Safety Information

Inspection/Maintenance Safety

- Always inspect socket, wedge and pin before using.
- Do not use part showing cracks.
- Do not use modified or substitute parts.
- Repair minor nicks or gouges to socket or pin by lightly grinding until surfaces are smooth. Do not reduce original dimension more than 10%. Do not repair by welding.
- Inspect permanent assemblies annually, or more often in severe operating conditions.

Assembly Safety

- Use only with standard 6 to 8 strand wire rope of designated size. For intermediate size rope, use next larger size socket. For example: When using 9/16" diameter wire rope use a 5/8" size Wedge Socket Assembly. Welding of the tail on standard wire rope is not recommended. The tail length of the dead end should be a minimum of 6 rope diameters but not less than 6" (See Fig. 1).
- To use with Rotation Resistant wire rope (special wire rope constructions with 8 or more outer strands) ensure that the dead end is welded, brazed or seized before inserting the wire rope into the wedge socket to prevent core slippage or loss of rope lay. The tail length of the dead end should be a minimum of 20 rope diameters but not less than 6" (See Fig. 1).
- Properly match socket, wedge and clip (See Table 1) to wire rope size.
- Align live end of rope, with center line of pin. (See Fig. 1)
- Secure dead end section of rope. (See Figure 1)
- Tighten nuts on clip to recommended torque. (Table 1)
- Do not attach dead end to live end or install wedge backwards. (See Fig. 2)
- Use a hammer to seat Wedge and Rope as deep into socket as possible before applying first load.

Operating Safety

- Apply first load to fully seat the Wedge and Wire Rope in the socket. This load should be of equal or greater weight than loads expected in use.
- Efficiency rating of the Wedge Socket termination is based upon the catalog breaking strength of Wire Rope. The efficiency of a properly assembled Wedge Socket is 80%.
- During use, do not strike the dead end section with any other elements of the rigging (Called two blocking).

FIG. 1 - "Terminator" Std. Wedge Socket

*Tail Length Standard 6 to 8 strand wire rope A min. of 6 rope diameters, but not less than 6" (i.e. - For 1" rope: Tail Length = 1" x 6 = 6")

Rotation Resistant Wire Rope A min. of 20 rope diameters, but not less than 6" (i.e. - For 1" rope: Tail Length = 1" x 20 = 20)

Rope Size	3/8	7/16	1/2	9/16	5/8	3/4	7/8	1	1-1/8	1-1/4
Clip Size	3/8	7/16	1/2	9/16	5/8	3/4	7/8	1	1-1/8	1-1/4
*Torque Ft./lbs.	45	65	65	95	95	130	225	225	225	360

* The tightening torque values shown are based upon the threads being clean, dry, and free of lubrication.

! WARNING !

FIG. 2 - "Terminator" Std. Wedge Socket

- Loads may slip or fall if the Wedge Socket is not properly installed.
- A falling load can seriously injure or kill.
- Read and understand these instructions before installing the Wedge Socket.
- Do not side load the Wedge Socket.
- Apply first load to fully seat the Wedge and Wire Rope in the socket. This load should be of equal or greater weight than loads expected in use.

Wire Rope Assembly & Fittings

Wedge Sockets/Ferrules

Pins for Open Wedge Sockets

Pins listed are standard and in stock; pins with two cotter keys or with square or hex machine bolts and nuts are also available.

Part No.	Description (in)	Wt (lbs)
P-5814	For 3/8 and 1/2 standard sockets	.6
P-5837	For 3/8 and 1/2 heavy, 5/8 and 3/4 standard skts.	1.25
P-5839	For 5/8 heavy socket	1.5
P-5871	For 3/4 heavy socket	3.
P-59021	For 7/8 and 1 heavy sockets	5.
P-58611	For 7/8, 1 and 1-1/8 std. sockets	2.5
P-59021	For 1-1/4 and 1-3/8 std. sockets	5.
P-59716	For 1-1/2, 1-5/8, 1-3/4 and 2 std. sockets	15.

Super Terminator™ Wedge Socket

Wedge socket terminations have a minimum efficiency rating on most high performance, high strength, compacted strand, rotation resistant wire ropes of 80% based on the catalog breaking strength of the various ropes.**

- Patent Pending design eliminates the difficulty of installing high performance wire rope into a wedge socket termination.
- Proper application of the Super TERMINATOR™ eliminates the "first load" requirement of conventional wedge socket terminations.
- S-423TW Wedge Kit can be retrofitted onto existing Crosby S-421T TERMINATOR™ wedge sockets.
- Wedge and accessories provided with a zinc finish.
- Meets the performance requirements of EN13411-6:2003.
- Meets or exceeds all requirements of ASME B30.26 including identification, ductility, design factor, proof load and temperature requirements. Importantly, these sockets meet other critical performance requirements including fatigue life, impact properties and material traceability, not addressed by ASME B30.26.
- Basket is cast steel and individually magnetic particle inspected.
- Pin diameter and jaw opening allows wedge and socket to be used in conjunction with closed swage and spelter sockets.
- Secures the tail or "dead end" of the wire rope to the wedge, thus eliminates loss or "punch out" of the wedge.
- Eliminates the need for an extra piece of rope, and is easily installed.
- The TERMINATOR™ wedge eliminates the potential breaking off of the tail due to fatigue.
- The tail, which is secured by the base of the clip and the tension device, is left undeformed and available for reuse.
- Available with Bolt, Nut, and Cotter Pin.

NOTE: For intermediate wire rope sizes, use next larger size socket.
The S-423T Super TERMINATOR™ wedge is designed to be assembled only into the Crosby S-421T TERMINATOR™ socket body.
IMPORTANT: The S-423TW for sizes 5/8" through 1-1/8" (14mm through 28mm) will fit respective size standard Crosby S-421T basket. The 1-1/4" (30-32mm) S-423TW will only fit the Crosby S-421T 1-1/4" basket marked with " TERMINATOR™".

FERRULES

Pointed Zinc Ferrules

This ferrule is pointed to enable it to pass under loads. Two holes are provided for pouring socket metal.

Size	Length (in)	O.D. (in)	Hook Size	Rope Size (in)	Approx. Wt. (lbs)
Light	3-3/8	2-1/8	Light	3/4, 7/8, 1	1.2
Junior	3-5/8	2-3/8	Junior	7/8, 1, 1-1/8	1.8

How to attach zinc-type ferrules

Use socket metal, not babbitt or lead. These metals will not adhere to the wire-clean the rope thoroughly, dirty wires will pull out of socket metal.

1. Drive ferrule on cable 2 ferrule lengths from end. On fiber core rope only, cut out hemp center. Separate strands wires and straighten to form brush.
2. Clean greasy wires with gasoline or solvent—an inexpensive paint brush facilitates grease removal.
3. After drying thoroughly, drive ferrule out to end of cable and distribute wires evenly, flush with ferrule top.
4. Place mud seal around bottom of ferrule & sprinkle with sal ammoniac between strands. It will serve as a flux—Pour socket metal, filling ferrule slightly above top to allow for metal shrinkage after cooling. Metal is at correct pouring temperature when blue tinge appears on metal surface immediately after skimming.

Do not exceed the Safe Working Load.

WARNING: Zinc type ferrules DO NOT develop 100% holding power (efficiency). Read and understand manufacturer's installation Instructions prior to use. Pull testing is recommended prior to use whenever the possibility of personal injury or property damage exists.

Zinc-Type Ferrules

Rugged zinc-type ferrules are made of shock and abrasion resistant alloy steel for maximum durability. These ferrules are designed to fit Bardon Hooks perfectly, insuring easy installation and trouble-free performance. Ferrules retain strength even after repeated exposure to heat. Zinc-type ferrules will not mushroom or spread.

Item	Ferrule Size Length (in)	Outside Dia. (in)	Hook Size	Rope Size (in)	Approx. Wt. (lbs)
D4	1-3/4	1-1/2	Dwarf	3/8, 1/2	.40
D5	1-3/4	1-1/2	Dwarf	5/8	.40
B4	2	1-5/8	Bantam	3/8, 1/2	.50
B5	2	1-5/8	Bantam	5/8	.50
B6	2	1-5/8	Bantam	3/4	.50
L6	2-5/8	2-1/8	Light	3/4	1.1
L7	2-5/8	2-1/8	Light	7/8	1.1
L8	2-5/8	2-1/8	Light	1	1.1
J7	2-3/4	2-3/8	Junior	7/8	1.8
J8	2-3/4	2-3/8	Junior	1	1.8
J9	2-3/4	2-3/8	Junior	1-1/8	1.8
J10	2-3/4	2-3/8	Junior	1-1/4	1.8
S9	3-3/16	2-13/16	Standard	1, 1-1/8	2.9
S10	3-3/16	2-13/16	Standard	1-1/4	2.9
S11	3-3/16	2-13/16	Standard	1-3/8	2.9
S12	3-3/16	2-13/16	Standard	1-1/2	2.9

Note: LJ Ferrule sizes have been discontinued. Use junior Ferrules on all Light Junior hooks.

Wire Rope Assembly & Fittings

Ferrules/Positive Grip Wire Rope Fittings

Wedge-Type Ferrules

1. Insert cable through the ferrule and spread the strands to insert wedge halves over the core of the wire rope.

2. Position individual strands into the proper grooves around the wedge halves and tap wedges until they are flush with strand ends.

3. Slide the ferrule back over the wedge and drive the wedge into the ferrule with a hammer and short pipe which fits inside the strands and over the core.

4. Installation is complete. The first load will seat the cable and wedge securely in the ferrule.

ESCO's machined wedge-type ferrules let you make up or repair chokers and winchlines in minutes: No molten socket metal or swaging equipment is required.

Ferrules are made of high strength alloy steel which resists splitting or cracking under severe loads. The two-piece wedges are rifled to pro-

vide more gripping surface on the wire rope strands for greater holding power.

IMPORTANT: Wedge-type ferrules are intended only for use with new 6x19 or 6x37 Class, right regular lay, EIP, IWRC or FC wire rope made to U.S. specifications.

⚠ WARNING

Strands should project above the wedge about 1/4" & should not finish below the end of the wedge.

Wedge type ferrules do not develop 100% holding power (efficiency). Read & understand manufacturer's Installation Instructions prior to use. Pull testing is recommended prior to use whenever the possibility of personal injury or property damage exists.

POSITIVE GRIP WIRE ROPE ASSEMBLIES/FITTINGS

Ordering Information for Positive Grip Fittings

ONE

Rope Size Determination

Because fittings are built to close tolerances, and to insure your complete satisfaction with the product, be certain rope sizes are correctly determined before selecting fitting sizes to match.

The correct and incorrect points for wire rope measurements are shown in these illustrations. With any type of rope, always measure at the points that will register the widest diameter.

TWO

Specify Rope Construction

Each type of rope requires a specific type of plug to insure positive grip by the fitting. Plug selection made at the factory on receipt of your order specifying rope construction. There is also a chart in this catalog of the most common wire rope plugs. As a guide, here is a listing of some of the common rope constructions:

Wire Rope

6 x 19, 8 x 19, etc.

Independent Wire Rope Core (IWRC) or Hemp Center (HC), Fiber Center (FC)

Synthetic Rope

Braided (single or double) Plaited or three strand, Jacketed, and Contrahelical

Electro-Mechanical (Conductor Core)

Armor wire diameters

Core diameter

THREE

Specify Material

Wire Rope • IPS, EIP, EEIP, etc.

Synthetic Rope Nylon, Polyester, Fiberglass, Kevlar, Technora, etc.

FOUR

Machined vs. Forged Fittings

Standard forged-steel clevis and oval eye fittings are used where extra strength is required.

Rated at 2 times the rated breaking strength of I.P. rope, these fittings are available unplated or galvanized. Other steel forged fittings are rated higher than I.P. rope.

Forging tolerances may vary slightly from dimensions listed in this catalog. Please contact the factory for dimensions requiring close tolerances.

Machined fittings, available in carbon steel, stainless, aluminum and bronze, are rated at 1.3 times the rated breaking strength of the I.P. rope and provide finer adjustment, better aesthetics and corrosion resistance.

NOTE: Stainless, with its lower yield strength, may deform at lower loads than steel fittings.

FIVE

Plating

Steel fittings are manufactured with a variety of finishes. It is important to specify the finish desired by means of the suffix or last letter of the part number.

For example:

N • Natural finish, no plating

V • Zinc electroplated

X • Hot dipped galvanized

NOTE: All sleeves will be zinc electroplated where the assembly plating is specified "X".

Wire Rope Assembly & Fittings

Positive Grip Wire Rope Assemblies & Fittings

Typical Wire Rope Fitting Assembly

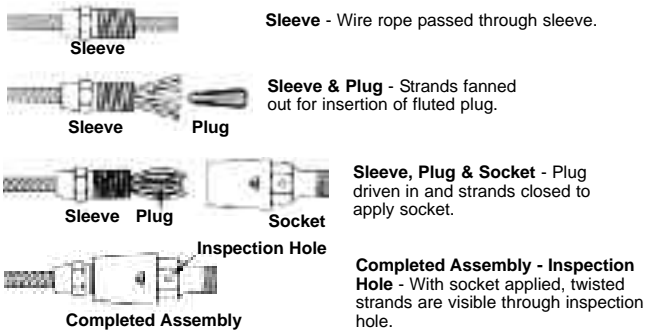

These fittings are the first real advance in connecting practices since the development of wire rope. These fittings are remarkably compact assemblies of three basic units:

1. The SLEEVE, which slips over the end of the rope.
2. The PLUG, which is inserted to separate and hold the rope strands in the sleeve.
3. The covering SOCKET

The combination of these three units literally locks the rope into a strong, solid assembly.

SAFE WORKING LOADS

These terminations, when properly assembled, will hold the "normal" or "rated" breaking strength of IPS wire rope. They are certified by the "Underwriters Laboratory, Inc." (Safety Appliance No. 799) to hold no less than 85% of the rated breaking strength of the rope. Fittings are designed for linear loads only. Terminations are NOT marked with safe working load (SWL) as the termination is a component of an assembly which includes the wire rope. Due to the many different types of ropes with which our termination may be used, the safe working load is dependent upon the type of rope and the usage. Electroline terminations are designed to have a breaking strength greater than 6 x 19 IPS IWRC wire rope of the corresponding size. Our safety factor is 1.3 for the steel machined fittings, and 2.0 for the forged steel clevis and eye assemblies. However, the rope is the weakest component of the assembly, and these safety factors cannot be used to determine the SWL of the assembly.

Wire Rope Assembly Kits

For easier, more efficient assembly of Wire Rope Fittings, it is suggested that assembly kits be used.

The assembly blocks prevent the wires of the rope strands from being nicked by the jaws of the vise, protect the lay of the strand, and hold all of the wires of the strand firmly so that the plug can be driven to a solid seat.

Assembly kits, as illustrated here, are available in many sizes. For ordering information, see chart.

Assembly Block

Hole Diameter is 1/32 Smaller than Cable Diameter

Wire Rope Assembly and Fittings

Wire Rope Plugs

The key to the positive grip of Electroline terminations is in the plug design. Depending on the type of rope, each plug is shaped and manufactured from specific materials to maximize holding power. Plugs for the more common wire rope constructions are represented here.

However, our engineers have developed other configurations for ropes not listed. Please call, for answers to your rope termination problems.

To order a plug, first locate the vertical column, under Wire Rope Construction, that lists the TYPE of wire rope for which the replacement plug is to be used.

Second, where the row showing your rope size (in column at lower left) intersects with the rope TYPE column, the correct replacement plug for that type and size wire is listed. Please call for other rope constructions.

Tin Plated Copper Oval Sleeves

The 428 Series oval sleeves are made from special materials and are specifically designed for use with stainless steel aircraft cable. The tin plating gives this Nicopress sleeve a distinctive appearance.

Copper Duplex Sleeves

EXTRUDED COPPER DUPLEX SLEEVES, ZINC PLATED COPPER SLEEVES and COPPER BUTTONS have efficient cold forming properties, and are ideal for non-rusting permanent splices. These sleeves and buttons are 99% pure copper, and the mass of copper provides excellent holding strength.

Return eye splice using COPPER DUPLEX SLEEVES will attain 95% of Improved Plow wire rope catalog -strength when properly swaged.

CAUTION: Return eye slings using copper duplex sleeves must be properly swaged to attain strength.

1/2	1700-J8	1700-J8	110	2

Note: Mechanical hand tools and bench tools are available for compressing sleeves onto cable 1/32" to 5/16". Larger cable sizes require use of the Nicopress #635 hydraulic tool with pressing dies. Information on power press dies for high speed production will be furnished upon request.

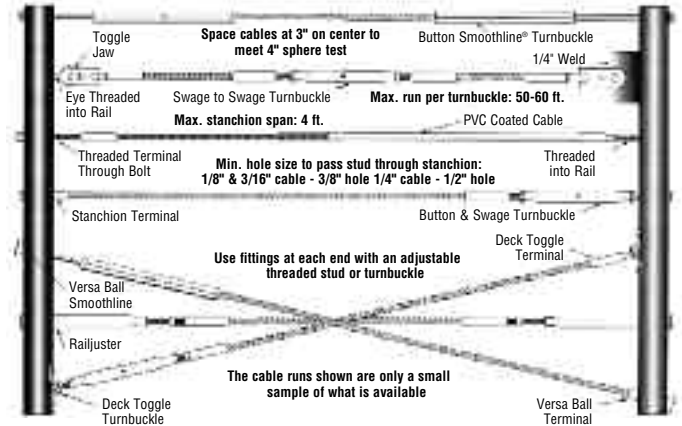

Warning: Aluminum sleeves may not develop 100% holding power (swaging efficiency). Testing is recommended prior to use to determine the holding power for any particular application, especially when the possibility of personal injury or property damage exists.

CABLE ASSEMBLIES

Cable Assembly

A complete cable assembly must have the following elements:

- 1) A turnbuckle or an adjustable threaded stud to tension the cable.
- 2) An attachment point at each end, with an end fitting, that will support the tension of the cable. Unless you have these two elements, you do not have a proper cable assembly. The following cable assemblies are only a small sample of what is available. There are many different ways to make a cable assembly. Aesthetics are very important so we provide many different fittings that do the same thing but look different. You can design your rail and mix & match to come up with just the look you want.

Cable Assembly: How to Measure

- Measure eye and fork terminals from center of pin holes.
- Measure ball fittings from center of ball.
- Measure stud terminals from end of terminal.
- Measure loop from bearing in loop. When ordering loops without thimbles, specify size of pin the loop is to fit around.

Wire Rope Assembly and Fittings

Wire Rope Assembly & Fittings

Cable Assembly/Swaged Cable Fittings

Fittings

Cable assemblies are available made with swaged fittings and compression sleeves. The swaged fittings develop holding power equal to the strength of the cable when properly swaged onto all metal cables. They should not be swaged onto cables having fiber cores. Our swaging is done with rotary swaging machines, which provide uniform cold-working and a smooth finish without lines or areas of overworking. All swaged fittings are proof loaded at 60% of rated cable breaking strength unless otherwise specified.

The compression oval sleeves will also develop holding power equal to the rated strength of the cable when applied to the flexible cables with the proper compression tool. We also supply the swaged fittings and the compression sleeves loose.

Stamped Eyes SW-730 & 731

Tuf-Grip Stamped Eyes are convenient, economical fittings designed for several applications such as door restraints, telephone book binders, vehicle glove compartment restraints and many others.

Their one-piece, drop-forged construction helps assure long-lasting use. Measure their length from the end of the fitting to the bearing of the eye.

For zinc-plated construction, choose the SW-730 Stamped Eye. For stainless steel, choose the SW-731.

Terminal, Cylindrical ST 24

Also known as "Stop Buttons", "Sleeves," "Boeing Buttons," (Boeing Part No. BACT 14A), these Stainless Steel Terminals have a multitude of uses. When properly applied they will hold the breaking strength of the wire rope (except for 1 x 7 or 1 x 19 constructions).

Part No.	Cable Dia.	A	B	C	D	C=As	Die Size	Lbs. Per Piece
ST24-2*	1/16	.224	.221	.190	.076	.190	3/32	.0019
		.214	.217	.185	.073			
ST24-3*	3/32	.333	.252	.219	.107	.219	1/8	.005
		.323	.248	.214	.104			
ST24-4*	1/8	.416	.298	.250	.146	.250	5/32	.0075
		.406	.294	.245	.141			
ST24-5*	5/32	.510	.377	.313	.177	.313	3/16	.01
		.500	.373	.303	.172			
ST24-6*	3/16	.635	.439	.315	.208	.375	7/32	.114
		.625	.435	.370	.203			

Minimum breaking strength of ST24 Terminals equals minimum breaking strength of flexible carbon steel wire rope conforming to Specification MIL-W-83420, For swaging of these terminals, the dies for the next larger size AN/MS Standard Terminals are required.

Jaw Smooth Turnbuckle

The Smooth Line Turnbuckles are state-of-the-art fittings. The cable is terminated internally so one does not see a swage terminal (or threads) as on a conventional turnbuckle. The Jaw Smooth Line Turnbuckle adapts itself to wide variety of projects. The jaw will easily attach to eyes, tabs or in a channel.

Cat. No.	Wire Size (in)	Open (in)	Closed (in)
60-700	1/8	8	6-5/16
60-702	3/16	8	6-5/16
* Hand Crimp			
26-715	1/8	8	6-5/16
27-715	3/16	8	6-5/16

Deck Toggle Smooth Line Turnbuckle

The Deck Toggle Smooth Line Turnbuckle will mount to any flat surface. It can be through bolted by its two tabs and also has the ability to toggle 140°.

Cat. No.	Wire Size (in)	Open (in)	Closed (in)
60-700-1	1/8	8	6-5/16

27-412-10F	3/16	12	8-1/2

Versa Ball & Swage Turnbuckle

The Versa Ball and Swage Turnbuckle is made to accept the angles of stairways. The versa-ball allows the turnbuckle to integrate itself to your desired angle. The ball allows this turnbuckle to gimbal in its mount.

Note: 5/32" cable size available.

Cat. No.	Wire Size (in)	Open (in)	Closed (in)
19-314-10V	1/8	11-1/4	8-1/4
19-316-10V	3/16	11-1/4	8-1/4

27-412-10V	3/16	12	8-1/2

Swage to Swage Turnbuckle

Appearing in the middle of the cable, the Swage to Swage Turnbuckle needs a fitting at each end to make a complete assembly. You need to use three fittings per cable run but it makes for a distinctive look.

Also available in new "shortie" sizes, 3" long body with 2" of adjustment.

Cat. No.	Wire Size (in)	Open (in)	Closed (in)
19-314-3	1/8	11-3/4	8-3/4
19-316-6	3/16	11-3/4	8-3/4

NOTE: A swaged turnbuckle body may be substituted for smaller rope sizes, resulting in slightly longer overall length.

3 Wire Rope Assembly and Fittings

Deck Toggle & Swage Turnbuckle

Our DeckToggle and Swage Turnbuckle can be mounted to any flat surface and is held in place by two tabs suitable for through bolting. The best feature of the deck toggle is it can articulate 140°.

Also available in new "Shortie" size, 3" long body with 2" of adjustment.

Cat. No.	Wire Size (in)	Open (in)	Closed (in)
19-314-1T	1/8	10-3/4	7-3/4
19-316-1T	3/16	11-1/4	8-1/4
* Hand Crimp			
26-412-1T	1/8	11-1/2	8-1/2
27-412-1T	3/16	11-1/2	8-1/2

END FITTINGS:

Toggle Jaw

- Machine Swage & Hand Crimp

*Not a true 1/8" fitting (sleeve)

Cat. No	Wire Size (in)	Length (in)
25-314*	1/8	3-3/16
25-316	3/16	3-5/16
25-308-7	1/4	3-1/4
