File Terminology

- Work to be accomplished, roughing or finishing, will determine type of teeth and coarseness for each application
- Most American pattern files are available with 3 grades of cut: bastard-cut, second-cut and smooth-cut
- Swiss pattern files are available in seven cuts: No. 00, 0, 1, 2, 3, 4 and 6
- The degree of coarseness is greater in longer files, but differences between bastard, second and smooth are proportionate

Coarseness:

- Length is measured exclusive of tang, from point to heel, unless specified otherwise
- Desired stroke length, type of material and size will determine length required

Length:

- Area to be filed will determine specific cross-section (round, square, flat, etc.) to be used

Shape:

Kinds of Teeth:

Single-cut

- Single set of parallel, diagonal rows of teeth
- Single-cut files are often used with light pressure to produce a smooth surface finish or to put a keen edge on knives, shears or saws

Double-cut

- 2 sets of diagonal rows of teeth
- Second set of teeth cut in opposite diagonal direction and on top of the first set
- First set of teeth is known as the overcut, second is known as upcut
- Upcut is finer than overcut
- Double-cut file is used with heavier pressure than the single-cut and removes materials faster from the work piece

Rasp-cut

- Series of individual teeth which are formed by a single-pointed tool
- Produces a rough cut that is used primarily on wood, hooves, aluminum and lead

Magicut

- Single cut teeth divided by angular serrations into shorter cutting edges, which free themselves readily from chips and perform roughing and smoothing at the same time

Curved-cut

- Teeth arranged in curved contours across the file face
- Curved-cut file is normally used in automotive body shops for smoothing body panels

AMERICAN PATTERN FILES:

Aluminum Files-Type "A" Flat

- Special tooth construction eliminates clogging when filing aluminum
- Flat shape
- Double-cut
- All sizes have same number of teeth per inch
- Smooth finish obtained by using shearing cut toward left

Garland's all-rawhide mallets are made of tough, long wearing, water buffalo rawhide. They're ideal for use on broad-faced striking surfaces in a broad range of applications.

Dead-Blow Hammers

Standard Head

Soft-faced, Dead-Blow Hammers are made of high-quality, hot-cast polyurethane that gives them outstanding elasticity. The custom-formulated material also gives the hammers a self-healing feature that makes them resistant to dents, abrasions and cuts for longer use.

Telescoping Gages

- These gages are used for quick and accurate measurement of inside diameters of holes and widths of slots from which micrometer measurements are taken.
- Both gaging ends are heat treated tool steel and ground to a radius for measuring the smallest hole the gage will enter.
- Self centering action ensures accuracy.
- Long handled design provides improved reach in deep holes and slots.
- Satin chrome finish.
- Available in sets of four and six.

BENDING & CUTTING PRODUCTS

SITE-RITE® Heat-Treated Aluminum and SITE-RITE II® Malleable Iron Hand Benders

Both Benders feature:

- Handle straight up and down for 30° bends.
- Patented sight indicator on bender is a key feature for bending angles fast and easy.
- Non-slip, contoured pedal for added leverage.
- Strong, stable square hook design.
- Cast-in markings for stub-ups, saddle bends, back-to-back bends and head-up or down bending.

SITE-RITE® Aluminum Benders feature:

- Special design and heat-treated aluminum construction make this patented hand bender significantly stronger.
- Cast-in offset multipliers.

Knockout Punches

- The contractor's choice - worldwide.
- Unique punch profile splits slugs allowing easy slug removal.
- Use with manual, ratchet, hydraulic or battery powered drivers.
- Uses standard Greenlee dies and draw studs.
- Available in sizes up thru 2.52"
- U.S. Patent #4,543,722

Unique Slug Buster® punch design creates slug as the punch is drawn into the die.

Slug is split in half as punching operation is completed.

Split slugs fall free from the die and stud.

Specifications:

Capacity: Mild steel up thru 10 gauge.
Application: Punch mild steel, aluminum, fiberglass and plastic.
Hole Size:
Conduit Sizes - Hole size is outside diameter of US conduit sizes. Example: 1/2" conduit size punch actually makes a 7/8" hole.
Pg Sizes - European standard pipe sizes. (not shown, call for Pg specs)
ISO Sizes - International Standards Organization pipe sizes.
Operation: Operate manually, or with ratchet, hydraulic or battery drivers. When used with ratchet, hydraulic or battery drivers, buy the punch and die only; the draw stud is part of the driver kit

"Custom Size" punches and dies available. Please contact us with your requirements.

D'versBIT® System:

A new twist to an old problem. These flexible steel drill bits are the right tools for installing wire or cable inside existing walls.

It bends to meet your needs! Fishing wire or cable through existing walls used to be frustrating and time-consuming, but the D'versiBIT® has made it as simple as bowing the spring steel shaft in the direction you want to drill and turning on the power. Proven in the field to deliver accurate and professional results in many applications. Bits range from 1/4" to 1" in diameter and in shaft length from 18" to 72".

The D'versiBit® System makes it possible to easily accomplish even complex installations. This patented system attaches a quality drill bit to a long flexible spring steel shaft. When used with the Placement Tool, this flexibility makes it possible to easily manipulate the bit within walls. After drilling, attach a D'versiGRIP to the hole in the drill and pull wire or cable back through the wall.

Type A, Auger

- Wood-type auger bit with screw point. 
- Pulls itself through wood, avoids walking or skidding.
- Excellent for drilling in soft woods or through thin sections.

Type B, Combination w/Screw Point:

- A popular bit that can be used in many applications. 
- Screw point for easy starting and pulling through wood.
- With screw point removed, this bit can be ground to function like a standard combination bit.

Type C, Combination:

- For drilling in wood and light sheet metal. 
- Drilling speed relative to pressure applied.
- Chips can be brought easily out of the hole.
- This bit is excellent for tough woods and thick obstacles.

Type M, Masonry

- For drilling in masonry walls and through plaster. 
- Recommended for use with Abrasion Shield to reduce friction and abrasion as the shaft turns against masonry.

Type HS, High Speed Steel

- Designed for aggressive cutting in all types of wood. 
- Retrieve wire or cable by removing the drill motor, attaching D'versiGRIP and wire to chuck end of shaft and pulling from drill end of shaft.

MagnumPRO™ Fiberglass Fish Tapes

- Nonconductive fiberglass tape with patented low friction coating for faster and easier fishing.
- Perfect for fishing in conduit with wire or cable present.
- Advanced comfort handle grip reduces fatigue.
- Superior rapid tape pay out and rewind.
- Smaller Fish Eye with offset bend for improved fishing ability.
- Improved low profile tip for easy fishing through all sizes of conduit.
- Viewing Port gives visibility to remaining tape and ability to remove jobsite debris quickly.
- Rugged case design improves drop impact capability.
- Flared case with Grip Ridges for no slip handling.
- Available in 50', 100' and 250' lengths.
- Replaceable tips.
- Exclusive, unique, lightweight reel for easy positive feed out and rewind.
- Excellent for installation of telecommunications and data communication-cables in overhead plenums, above suspended ceilings and under floors.
- Fiberglass fish tape is the fastest manual fish tape available. It is intended for fishing only. Rope or line is recommended for pulling.

Cable Pulling Rope Safety Tips

WARNING: Rope is a very critical link in the cable pulling system. The following steps should be observed in the selection and use of cable pulling rope.

1. Select a rope with an average breaking strength at least four times the rated capacity of your puller (rope safety factor). A safety factor of 4:1 minimum or greater than 4:1 is REQUIRED for pulling inside of raceways with a minimum of rope length exposed. Higher safety factors are recommended if the pulling rope is exposed.

Required safety factors are for new rope in good condition without kinks or splices. When pulling, avoid sharp corners, edges, wedging or dragging over rough ground. Dirt and grit picked up by the rope can work into the strands reducing its pulling capacity. If there is any question, discard the used rope.

2. Use only low stretch Double Braided Polyester for high force cable pulling. High stretch ropes store energy much like a stretched rubber band. If, for any reason, there is a failure of the rope, pulling grip conductors, or any other component in the pulling system, this "stored-up" energy will suddenly be unleashed. The whipping action of a rope can cause considerable damage, serious injury or death.

3. Inspect rope thoroughly before using. Make sure there are no cuts or frays in the rope. Remember the rope is only as strong as its weakest point. **INSPECT THOROUGHLY BEFORE USING!**

4. When designing the pull, keep rope confined in conduit wherever possible. Should the rope break or any other part of the pulling system fail releasing the stored energy in the rope, the confinement in the conduit will work against the whipping action of the rope by playing out much of this energy within the conduit.

5. Do not stand in direct line with the pulling rope.

$$\text{ROPE SAFETY FACTOR} = \frac{\text{Rope Average Breaking Strength}}{\text{Maximum Pull Force Developed By Your Cable Puller}}$$

Double Braided Composite Rope for High Force Cable Pullers

- Custom made to Greenlee specifications to provide 4:1 Safety Factor required for cable pulling.
- Double braided inner core with an extra double braided outer jacket for added strength and less stretch; white with green tracer.
- Rot and mildew resistant
- Factory spliced eyes at both ends.
- Lowest stretch.
- Select a rope with a maximum rated capacity that meets or exceeds the cable puller's maximum pulling force.

Shape Cutting Attachments and Templates

Even novices to pipe cutting and beveling can achieve superior-quality craftsmanship in making saddles, Y's, T's, miters and various angle cuts on all H&M machines with shape cutting attachments and templates.

Each custom-made, H&M prefabricated metal template is bolted to the face of the ring gear. The torch is spring-loaded against the template. While the machine rotates around the pipe, the torch moves along the same path as the template. The triangular design of hard-anodized travel tubes and carriage rollers ensure lateral torch stability and smooth, consistent, horizontal torch travel during a complete revolution. Achieve accurate cuts from proven patterns every time, even when cutting miters up to 45 degrees.

H&M

Band-Type Pipe Cutting and Beveling Machine

H&M is the leader with its Band-Type Pipe Cutting and Beveling Machine for speed, accuracy and versatile operations on large-diameter pipe. The H&M Motorized Beveling Head is constructed of cast aluminum. Its lightweight, compact design allows for easy one-man setup and operation. Seventeen different stainless steel bands provide a cutting range of 10" - to 96" -diameter pipe, plus special bands are available to cut pipe diameters up to 20 feet. In about five minutes a single operator can position the band and beveling machine head on 48" -diameter pipe and begin the cutting process. H&M's machine has the following features:

H&M Stainless Steel Bands

- Economical – each band overlaps numerous pipe sizes
 - Automatically compensates for over- and under-sized pipe
 - Unaffected by dope or coating on the pipe
 - Assures accuracy – overlapping squares up the band
 - Flexibility conforms to out-of-round pipe
- H&M Motorized Beveling Machine Head**
- Rugged, lightweight cast aluminum chassis
 - Easily portable at only 18 lbs.
 - Works with all H&M stainless steel bands
 - Variable speed control box with forward and reverse capabilities
 - Standard 90-volt DC motor
 - Speed ranges – 2 ipm to 24 ipm
 - 220-volt optional
 - Plasma speeds optional.

Note: The optional H&M Band-Type Machine Storage Box is ruggedly constructed, making it a safe storage place for one beveling machine head and several bands, plus torches, cutting tips, strikers, tip cleaners and more.

H&M Pipe-End-Prep Lathes

H&M presents the perfect tools for beveling, facing and counterboring, the H&M Pipe-End-Prep Lathe PEPL-400 for 1" to 4" pipe or tube and the PEPL-800 for 3" to 8" pipe or tube.

Both tools place bevels, lands and counterbore on ferrous and nonferrous materials up to SCH 160. Special tooling is available for heavier wall thicknesses. They are pneumatic-driven, lightweight, portable and complete with the following features and specifications.

PEPL-400

- 1" to 4" pipe capacity – 1" SCH 40 (1.049 ID) to 4" SCH 40 (4.02 ID)
- 1-5/8 hp heavy-duty pneumatic motor – 55 cfm and 90 psi
- One mandrel fits 1" to 4" pipe
- Adjustable "lock in" torque-accepting mandrel eliminates backlash and chatter
- 4" cutter head
- Bevels, faces and counterbores simultaneously
- 2" cutter head available for confined spaces
- One 37.5-degree bevel bit (PB-0333) and one facing bit (PB-0258)
- Heavy-duty storage case
- Operation Manual
- Portable
- Net weight 24 lbs.

PEPL-400

PEPL-800

- 3" to 8" pipe capacity – 3" SCH 40 (3.068 ID) to 8" SCH 40 (7.981 ID)
- 2-1/2 hp heavy-duty pneumatic motor – 70 cfm and 90 psi
- One mandrel fits 3" to 8" pipe
- Adjustable "lock-in" torque-accepting mandrel eliminates backlash and chatter
- Two sets of tool bit holders: one set 3" to 6" and one set 4" to 8"
- Bevels, faces and counterbores simultaneously
- One 37.5-degree bevel bit (PB-2905) and one facing bit (PB-2904)
- Heavy-duty storage case
- Operation manual
- Portable
- Net weight 58 lbs.

H&M APC-16 Adjustable Pipe Clamp

Here is one great tool that does the work of 12 cage-type clamps. The H&M APC-16 Adjustable Pipe Clamp comes complete and ready to align 2" - to 16" -diameter pipe.

Made of durable, ductile cast iron, the H&M APC-16 features convenient carrying handles and precisely machined V's for perfect pipe alignment every time. At only 31 lbs. it is also lightweight and easily portable to any job site. One person can position the clamp and start welding in about two minutes for most applications and pipe sizes.

Acme 3/4-6" threaded bolts and nuts tighten the pipe chain around the pipe. Each adjusting nut is fitted with its own handle. No extra tools or ratchet handles are needed. The Acme threaded bolts, nuts and chain are captive to the pipe clamp, eliminating any lost or misplaced items.

H&M/ Keson®

General Pipe Clamps

H&M offers General Pipe Clamps for 2" - to 60" -diameter pipe. Each is hinged for easy positioning around the pipe and available with flat or arched cross bars.

The Standard Pipe Clamp features a lever and a cam for tightening the clamp around both ends of an adjoining pipe.

The hydraulic Pipe Clamp employs an eight-ton hydraulic jack for opening and closing the clamp. This feature is especially important when aligning 16" - to 60" -diameter pipe.

The Ratchet Clamp includes precision-cut Acme thread design for strength and easy operation, plus an enclosed mechanism to prevent mud & dirt contamination. This clamp works on 10" - to 60" diameter pipe.

Note: The H&M Adjustable Pipe Clamp and General Pipe clamps are only designed for aligning pipe ends while welding. DO NOT use these clamps to support the weight of a pipe being lifted or moved and DO NOT use these clamps with shims, wedges or cheaters.

Master Chain Clamp

H&M introduces its new Master Chain Clamp, a versatile clamping system designed to increase productivity. One person can quickly and safely perform perfect fit-ups of flanges, tees and elbows in minutes. Each Master Chain Clamp works 4" - to 16" -diameter pipe/fittings. Additional chain links and jackbars can be added for larger pipe sizes. The clamp weighs 28 lbs. when fully assembled, but can be streamlined when working smaller-sized pipe.

Set-up, positioning and alignment for welding is now faster, easier & more precise.

WARNING: H&M's Master Chain Clamp is exclusively designed as a precision tool for aligning pipe fittings to pipe and end-to-end alignment of pipe for welding. It is NOT intended to support or lift the entire length of a pipe. Always exercise extreme caution when using this product.

Quick-Acting Flange Pins

With H&M's Quick-Acting Flange Pins start welding in minutes with very little fit-up time. Endless threading and unthreading of flange pins are now completely eliminated.

The secret is in the knob. Just tilt the knob to bypass the flange pin threads, then straighten the knob to grip the threads for tight, positive clamping. Removal is just as quick and easy. Loosen the knob, tilt and remove.

These precise, conical flange pins provide perfect centering on 5/8" to 1-1/2" bolt holes. Try a set of H&M Quick-Acting Flange Pins and experience why they are a "hole" lot better.

Depth Gauge

Developed for seismo-graphic measuring. The numbers are graduated from snap ring end hook upward to the strap handle. Simply attach a lead or brass weight (not included) to the snap ring and you're ready to measure depth.

A combination of extruded fiberglass and polyvinyl chloride make a very lightweight, tough, flexible rope that will withstand constant use in mud, water and over abrasive terrain.

Surveyors Rope

Quality engineered fiberglass rope with the same characteristics of the depth gauge. Makes an ideal drag chain for rough surveying measurements. The numbers are graduated from the strap handle upward to the end of rope.

Roadrunner® Measuring Wheels

Model RR-318N Graduated: Feet and inches

Model RR-310 Graduated: Feet and 10ths of a Foot

Model RR-3M Graduated: Metric & Decimeters

Ideal for long indoor runs such as plant floor plans or outdoor measuring on firm surfaces. Large 1 meter circumference (39.37") is more accurate over rough surfaces. The modern 3 spoke design wheel is not likely to get caught when measuring in tall grass, unlike wire spokes. Wheel is made of tough engineered plastic and has a molded rubber tire. No need to worry about corrosion. The unit adds in forward motion and subtracts in backwards motion. Counter features 5 digits and a reset button. The sturdy telescoping aluminum handle adjusts to fit the individual. Include: curved handle and molded grip. Weight 3.6 lbs. Packed 1 per carton. Backed by two-year warranty from date of purchase.

Keson Ultra-Fine® Marking Chalk

Ultra-Fine® Marking Chalk is formulated to Achieve Perfect Line Every Time! Constant Color Tones.

Keson chalk is a blend of basic inert materials with brilliant color oxides added to achieve the constant color tones needed for strong, sharp lines.

Colors include: Red, White, Blue and Yellow as well as Fluorescent Glo/Orange and Glo/Lime. Fluorescent colors are ideal when there is limited light available such as in new construction.

Keson Ultra-Fine Marking Chalk comes in 4 popular sizes including: 4 oz., 8 oz., 12 oz. and 5 lb. All size containers are functional squeeze bottles with color coordinated condiment style caps. Simply insert the long spout into the chalk line reel receptacle and squeeze the bottle with a gentle pumping action until reel is full.

Dual NM Cable Stripper/Cutter

- Quickly remove outer jacket of Type NM-B non-metallic-sheathed cable.
- Stripping holes easily remove insulation on 12 and 14 AWG lead wire.
- Precision staggered blades for square, clean cuts on solid copper wire.
- Narrow nose fits into tight places.
- Precision shear-type blades for square, clean cuts on solid copper wire.
- Curved handles help reach into confined areas.
- Strong-gripping serrated nose; for easy bending, shaping and pulling of wire.
- Wire looping and bending holes.
- Screw-shearing holes.
- Coil spring provides fast self-opening action.
- Handy closure lock for convenient storage.

Combination Wire-Stripping & Cutting Tools

- Compact, lightweight wire-stripping and cutting tool.
- Narrow nose fits into tight places.
- Hardened steel with precision ground stripping holes.
- Do not use for cutting steel wire or bolts.
- Spring-loaded action for self-opening.
- Precision-ground stripping holes for easy removal of insulation.
- Easy-to-read wire gauge markings on both sides for stripping in either direction.
- Black-oxide finish resists corrosion.
- Color-coded handles: red indicates stranded wire, yellow indicates solid wire.
- Textured handles provide a firm, comfortable grip.
- Wire looping and bending holes.

CRIMPING TOOLS

Crimping Tool

For non-insulated terminals and connectors.

- Designed for crimping non-insulated solderless terminals and connectors.
- Specially hardened wire cutter in nose.
- Tapered nose for working in confined spaces.
- Plastic-dipped cushioned handles for comfort.

Cat. No.	Length (in)
1006	9-3/4

Crimping Tool

For insulated and non-insulated terminals and connectors.

- Accommodates wire from No. 10 to 22 AWG.
- Specially hardened wire cutter in nose.
- Tapered nose design for working in confined spaces.
- Crimping die marked for insulated and non-insulated solderless terminals and connectors.
- Plastic-dipped, cushioned handles for comfort.
- Hot-riveted joint for smooth action and no handle wobble.

Cat. No.	Length (in)
1005	9-3/4

Compound-Action Ratcheting Crimper

- Compound-action tool crimps 10-22 AWG insulated terminals to meet or exceed MIL-SPEC pull-out tests.
- Built-in ratchet with safety release assures uniform crimps every time.
- Compound lever-action of narrow-span handles puts more crimping power into each squeeze.
- Special locator quickly positions terminal for double crimp.
- Comfort-grip plastic handles.

Cat. No.	Description
T1710	Compound-action crimper for 22-10 AWG insulated terminals.

Cable Preparation Tools

- Cuts, slits, and removes insulation from a variety of cables.
- Ideal for use in confined spaces.
- Adjusts to perfect circumferential cuts for the cable size.
- Integral steel slitter slits insulation between cuts without nicking the cable.
- Built-in grippers make removing the separated insulation easy.

CABLE CUTTERS

High-Leverage Cable Cutter

- High-leverage design for exceptional cutting capability.
- Precision, one-hand shearing action.
- Cable-gripping shear-type jaws.
- Perfect for working in confined spaces.
- Can be carried in most tool pouches.
- Hot-riveted joint ensures smooth action and no handle wobble.
- Beveled jaw tips provide proper mating and shearing action, which protects leading jaw edges.
- Through-hardened (not case-hardened) for longer-lasting cutting surfaces.

Cat. No.	Length (in)
63050	9-1/2

Compact Cable Cutter

- Precise, one-hand shearing action cuts 24 AWG copper, aluminum multi-strand cable and wire, and 100-pair telephone cable.
- Special shear angle cuts cleanly without compression to cable geometry for telecom cable work.
- Heat-treated, high-carbon steel shearing edges for long life.
- Forged body with 3/8" case-hardened rivet.
- Plastic-dipped handles for comfort.
- Not designed for cutting steel or ACSR.

Cat. No.	Length (in)
63055	8

All-Purpose Shears and BX Cutter

- High-leverage; shear-type design for one-hand operation.
- Lightweight, compact.
- Stripping notch for added convenience.
- Cuts a variety of materials including cable, sheet metal, steel strapping, and bundling wire.
- Handle cavity is designed to restore BX cable to original shape after cutting.
- Plastic-dipped handles for comfort.

Cat. No.	Length (in)
1104	7-5/8

Heavy-Duty Cable Shears

- Heavy-duty, tempered steel blades.
- Blades grip cable and cut easily at center of jaws.
- Lock keeps handles closed for easy storage.
- Comfortable, plastic-coated handles for steady grip.
- Hardened steel, precision cutting blades for long service life.
- Unique triangular jaws cleanly cut cable without compression or frayed ends.
- Lightweight tool perfect for overhead cutting.
- Cuts up to 1/4" copper and mild steel strands, up to 3/16" aircraft cable, wire rope, aluminum and copper rods, up to 5/32" for steel and iron rods.

Cat. No.	Length (in)
63016	7-1/2

Heavy-Duty Cable Shears

- High leverage ratchet mechanism for single-handed cutting of copper and aluminum cables, leaving no burrs or sharp edges.
- Patented two-step ratchet mechanism requires fewer strokes per cut.
- Quick release opens blades easily in every cutting position.
- Precision ratcheting mechanism holds cable tight and allows rapid, straight cuts with minimum effort.
- Hardened steel cutting blades for lasting strength and sharpness.
- Plastic covered handles with hand guards for comfort and firm grip.
- Locking lever keeps handles closed for easy transport, to fit in tool box or bag.

Utility Cable Cutter

- Forged steel with black-oxide finish for long life.
- Shear-type hook jaws grab and hold cable while shear-cutting action makes clean cuts.
- Beveled tips for positive mating.
- Hinge bolt with pin-set nut for proper blade tension.
- Non-slip vinyl grips.
- Not designed for cutting steel or ACSR.
- Maximum cable cutting 350 MCM copper and aluminum.

Cat. No.	Length (in)	MCM Cable Cutting Cap.
63035	16-3/4	350 Copper, 350 Aluminum

Standard Cable Cutters

- Lightweight, yet efficient shear-type cable cutters.
- Replaceable hook-jaw blades grab and hold cable while shear-cutting action makes clean cuts.
- Exceptionally strong fiberglass handles with heavy vinyl grips for comfort and slip resistance.
- Heavy-duty pins in head serve as blade-stops.
- Jaws are forged tool steel with black-oxide finish for long life.
- Beveled tips assure positive mating, and hinge on a rugged bolt with a pin-set nut to maintain proper blade tension.
- Make a clean, even cut for ease in fitting lugs and terminals.
- Not designed for cutting steel or ACSR.

Heavy-Duty Ratcheting Cutter

- Ratchet-action design provides maximum leverage with minimum effort for heavy-duty use.
- Cuts steel and ACSR.
- Forged, heat-treated, shear-type blades, plus a 24" long steel handles with heavy vinyl grips for comfort and slip-resistance.
- Blade-advance knob for fast rotation of the blade to engage the cable or other material being cut, plus a quick-release mechanism allows for removal of the cable or rod before completion of the cut, if desired.
- Not designed for cutting EHS Guy Strand or reinforcement rod.

Non-Contact Voltage Tester

- Non-contact detection of voltage in cables, cords, circuit breakers, lighting fixtures, switches, outlets, and wires.
- High intensity, bright green LED indicates the tester is operational and aids in illuminating the workspace.
- When voltage is detected, a high intensity, bright red LED illuminates and a warning tone sounds.
- Discrete digitally controlled ON/OFF power button.
- Auto power-off feature conserves and extends battery life.
- Microprocessor controlled low-battery indicator and tester shutdown.
- CAT IV 1000 Volt rating provides expanded operation and protection.
- 50 to 1000 Volt AC power operating range allows broad application.
- Durable polycarbonate plastic resin construction.
- Lightweight compact design with a convenient clip to fit securely in your pocket.

ELECTRICAL TESTER

Circuit Tester

- Tests circuits rated from 80 to 600 volts AC/DC.
- High-visibility neon lamp indicator.
- High-impact, sealed 5-11/16" probes on long 24" leads for convenience in testing motors, fuses, relays, switches, etc.
- Resistor between each probe and lead.
- Reliable electronic components.

Continuity Tester

- Battery-powered tester quickly checks continuity of dead circuits, switches, appliances, cords, fuses, motors, control equipment, coils, and panel boards.
- Also tests circuits for low-resistance shorts and helps identify wires in multi-wire cables.
- Spring-steel pocket clip serves as test probe.
- 36" lead with plug on one end, alligator clip on the other.
- Body is copper-nickel-plated brass with plug receptacle in one end, incandescent bulb in the other.
- Can also be used as a flashlight.

Continuity Tester

- Quickly reveals shorts or broken circuits in all types of electrical devices and controls.
- Tests for continuity of circuit with power off.
- Bulb in handle glows when circuit is complete (bulb included).
- Pointed 3-3/4" probe gets right to the problem.
- Deluxe 4" long handle with removable nylon cap holds replaceable bulb and battery.
- 36" test lead with alligator clip.

69133	Continuity tester complete with bulb, less battery. Overall length prod to clip, 43-3/4".
69131	Replacement bulb for Cat. No. 69133.

Low-Voltage Tester

- Device for checking live 6-24V, AC or DC circuits.
- Tests for shorts in automotive and truck electrical systems, motor field coils, radio and low-voltage circuits, ground circuit of all lamps, wiring, fuses, etc.
- Bulb in handle glows when circuit is complete (bulb included).
- Pointed 3-3/4" probe makes checking easier.
- Deluxe 3.5" long handle with nylon top holds replaceable bulb.
- 36" test lead with alligator clip.

69127	Voltage tester complete with bulb. Overall length prod to clip, 43-3/4"
69130	Replacement bulb for Cat. No. 69127

Low-Voltage Twin-Lead Tester

- Tests 5-50 volt, AC or DC circuits and components.
- Built-in lamp glows if circuit is live.
- Each of the 4-1/2" test leads has an alligator clip on the end.
- Handy pocket clip.

Cat. No.	Description
69134	Low-Voltage twin-lead tester, Overall length 8"

Multi-Volt Twin-Lead Tester

- Tests for DC polarity, frequency, and polyphase line.
- Checks and indicates voltage on circuits up to 460 volts, AC or DC.
- Combination of glow lamps indicate voltage being tested—110, 220, 277, or 460 volts.
- Test leads furnished with probes on the ends.

Cat. No.	Description
69135	Multi-volt twin-lead tester, Overall Length 7-7/8"

General Purpose Twin-Lead Tester

- Tests voltage in 90-250 volt range, AC or DC.
- Neon lamp glows indicating live circuit.
- The 5" test leads have probes on the ends.
- Handy pocket clip.

LINEMAN'S WRENCHES

Standard Type

- Forged from special bar steel and heat-treated for long life.
- Each end has two different size openings.
- Hole is provided at larger end for turning-in standard pole steps.
- Wrench is suited for use on the heavy three-bolt guy clamps on which clearance is limited.
- Dark blue painted finish.

Cat. No.	Description
3146	For 5/8" hardware. Large end has 1-3/32" and 29/32" openings. Small end has 13/16" and 5/8" openings.
3146A	For 3/4" hardware. Large end has 1-1/16" and 1-5/16" openings. Small end has 5/8" and 7/8" openings.

Bell System Type

- Wrench for telecom/datacom applications.
- Similar to standard lineman's wrench, but with end openings sized to NEMA hardware specifications.
- Silver painted finish.

Cat. No.	Description
3146B	Large end has 1-1/16" and 1-3/16" openings. Small end has 11/16" and 7/8" openings.

Adjustable-Head Construction Wrench

- Precision-machined jaws are individually chosen and assembled by hand for smooth operation.
- Knurl turns smoothly for easy operation.
- Versatile wrench fits all nuts and bolts to 1-1/2".
- Forged from select alloy steel with continuous-taper handle for aligning bolt and/or rivet holes.
- Industrial black finish for corrosion resistance.

Erection Wrenches

- Forged from select alloy steel to withstand high-leverage and heavy loads.
- Extra-heavy-duty head area gives maximum strength and durability.
- Continuous taper of handle makes lining-up bolt holes easy and works on a range of bolt and/or hole sizes without binding.
- Extra-large hub area works on larger diameter holes than other wrenches.
- Catalog number, bolt size and nominal opening size are stamped on every wrench for easy identification.
- American Bridge design.

Conduit-Fitting and Reaming Screwdriver

- Hooded-blade design keeps tip from slipping out of screws, especially when tightening hard-to-reach conduit fittings. Thicker hood is designed for rugged use.
- Reams and smooths 1/2", 3/4", and 1" thin-wall conduit ends to protect wire and permit correct installation of fittings.
- Reams both the inside and outside of the conduit at the same time.
- Longer Cushion-Grip handle provides comfort and more torque for reaming.
- Replaceable reaming blade is now held in place with a 1/16" hex socket set screw.

INSULATED TOOLS

- Klein insulated tools exceed IEC 60900 and ASTM F1505 standards for insulated tools, and are clearly marked with the official 1000-volt rating symbol.
- Two layers of insulation provide protection against electric shock.
- Individually tested to exceed standards.

Insulated High-Leverage Diagonal Cutters

- High-leverage design. Rivet is closer to the cutting edge for 36% greater cutting power than other plier designs.
- Custom US-made tool steel.
- Integral guards help prevent hand contact with conductive parts.

FISH TAPES

High Strength 1/8" Wide Steel Fish Tape

- Permanent, laser etched 1' increments on the tape allow you to more accurately measure the depth of conduit runs and determine the amount of tape left to pay out.

13" case diameter allows you to reel in 15% more tape in a single revolution than similar sized 12" tapes saving you time and effort.

Raised fingerrips help transfer 100% of the winding power from your hand and fingers.

Round inner ring design provides a smooth, consistent and comfortable surface for winding and rewinding.

The unique sloped handle optimizes the position of your hand for quick handover-hand rewinds and allows a more level payout of tape on the backswing while feeding conduit.

Polypropylene case and handle are extremely durable and offer the maximum in shock and impact resistance.

Block & Tackle

- These are NOT occupational protective hooks. NOT for human support.
- Light, galvanized-steel shell blocks are fitted with snubbing hooks to hold the load.
- Sheaves are strong yet lightweight aluminum alloy with all-bronze bushings.
- Available with standard snap hooks or guarded snap hooks (with snap hook nose lengthened to extend over latch or keeper).
- Choice of forged hook Cat. No. 258 or swivel hook Cat. No. 259.
- Hooks fit under insulator and engage pin on cross-arm.
- All Klein block and tackle use high-quality, 3/8" diameter rope.
- Maximum safe load is 750 lbs.

Cat. No	Description	Weight (lb)
1802-30	Blocks with standard snap hooks. Furnished with 25' of 3/8" rope. Has Cat. No. 267 block with snap hook and a detachable forged anchor hook (Cat. No. 258) on one end, and block Cat. No. 268 with eye and rope tie-off on other end.	2.80
1802-30SR	Same as Cat. No. 1802-30, but with rope spliced to Cat. No. 268 block	2.80
1802-30S	Same as Cat. No. 1802-30, except supplied with a detachable swivel anchor hook (Cat. No. 259) instead of hook Cat. No. 258	2.85

Grizzly™ Bar

- A heavy, strong, multi-purpose tool that saves time and effort on the job.
- The 3" width protects concrete when stripping forms.
- Efficient blade angle and 55-1/2" total length provide high leverage as a crow bar and nail and spike puller.
- Blade is forged and hardened alloy with keyhole nail-pulling slot in center and V-notch in tapered edge.
- Very efficient nail-pulling tool even in awkward positions.
- Can also be used to help align walls during tilt-up construction, to roll and align large pipe, to remove shingles and flooring, and for many other stripping and prying tasks.

Cat. No	Overall Length (in)	Weight (lb)
64306	55-1/2	12.00

BULL PINS

Broad-Head Bull Pin

- Forged, heat-treated bull pin increases efficiency by providing a larger striking surface.
- Head design also reduces chance of pin slipping from the hand when aligning holes.
- Angled head and smooth blending of radii increase strength and reduce the danger of chipping.
- Below the head, squared-off shoulders have been forged to provide a surface for applying wrench to loosen wedged bull pins.
- Long, even taper reduces binding and hang-up.
- Added resistance to "mushrooming" permitting much longer use than is possible with conventional designs.
- Heat-treated for strength.
- Black finish for rust resistance.

Cat. No	Length (in)	Point Diameter (in)	Top Diameter (in)	Weight (lb)
3255	13-3/4	5/16	1-1/4	2.90
3256	10	1/4	1-1/16	1.60

Standard Bull Pin

- Machined from quality alloy steel.
- Standard design offers greater initial economy, but no added protection against mushrooming.
- Heat-treated for strength.
- Black finish for rust resistance.

Cat. No	Length (in)	Point Diameter (in)	Top Diameter (in)	Weight (lb)
3251	15	3/8	1-1/16	2.50

DRIFT PINS

Barrel-Type Drift Pin

- Machined from quality alloy steel.
- Tapers are uniform and blend into body diameter.
- Tough, forged steel will properly end-pein in use.
- Heat-treated for strength.
- Black finish for rust resistance.

Cat. No	Length (in)	Point Diameter (in)	Maximum Diameter (in)	Weight (lb)

RIPPING BARS

Carbon-Steel Ripping Bar

- Strong, high-carbon forged steel construction.
- Thinner straight claw for ripping has both "V" and keyhole nail pullers.
- Heat-treated claws for extra strength.
- Efficient, double-claw design.
- Baked-on black finish for rust resistance.
- Heavy 90° claw gets into tight spaces.
- Includes one "V" nail puller.

Cat. No	Overall Length (in)	Weight (lb)
66380	18	2.50

Hand Tools

Klein Tools

Spring-Steel Ripping Bar

- Forged spring steel 1/4" thick and 1-1/2" wide.
- Fully heat-treated with sandblasted finish for better gripping.
- Both ends with pry edge and "V" nail puller; one end curved, the other at 90° angle.
- Keyhole nail-puller in body.

Cat. No	Overall Length (in)	Weight (lb)
66384	14	1.60

Connecting Bars

- Provides extra leverage when positioning steel members and aligning bolt holes.
- Forged fit-up bar is pointed on one end.
- Chisel-end is at a 15° angle to give greater leverage.

"CHICAGO® GRIPS"

Grips for Large Diameter Conductors

- Designed for hollow conductors and other large-diameter cables.
- Round jaws are shaped to provide maximum contact with the cable, virtually eliminating conductor damage.
- These grips are special order only. Please allow 30 days for delivery. These are not returnable.
- Orders must specify exact outside diameter of cables, circular mills with strand combination, or manufacturer's code.
- Each grip is made for one-size cable only.
- Minimum-maximum sizes listed indicate the unfinished size-range capability for each Cat. No. Each grip is finished to fit one specific cable size only within range shown.
- 1628-50 is furnished with removable floating jaw held in place by a bolt swaged into the lever arm of the grip, secured by a nut and cotter pin. Jaw must be removed to insert cable.

Grip for Bare ACSR, Aluminum and Stranded-Copper Cables

- Round, smooth inside jaw contour on this series of grips is ideal for bare ACSR, aluminum, and stranded-copper cables.
- Smooth jaws grip with maximum contact and are less likely to damage conductors.

Grip for Aluminum Conductors

- Lightweight grips designed for use on aluminum conductors in distribution work.
- Round jaws shaped to provide maximum contact with circumference of cable, less likely to damage conductors.
- Supplied with spring and locking loop handles, allowing jaws to be held in open position for easier placement on cable.
- Can be supplied with hot-line latch on special order.

Grip for Weatherproof Wire

- Round inside jaw contour for weatherproof coated wire.
- Notches in jaw provide firm grip on insulation.
- Note: Due to various types of weatherproof coatings available, selection of proper grips is determined by outside diameter of cable.

Cat. No	Approx. Wght Each (lb)	Jaw Length (in)	Maximum Cable (in)	Max Safe Load (lb)	Minimum Cable (in)

Grip for PVC-Covered Conductors

- Serpentine jaws are specially machined to allow insertion of insulated conductor through the jaws, which reduces danger of slippage which might result in insulation damage.
- Eliminates necessity of stripping insulation from conductor.
- Round inside-jaw contour.

Klein Tools

Grip for Extra-High-Strength Cables, Messenger, Guy Strand and Conductors

- A family of grips for cable sizes from .12" to 1.0".
- Double "V" grooves give four-point contact, reducing chance of slipping and providing proper alignment of wire and cable.
- For larger conductors, see our grips with round inside-jaw contour.

Parallel-Jaw Grip

- Lightweight, compact grips pull an exceptionally wide range of cable sizes and types.
- Designed with a round inside-jaw contour for maximum contact to minimize conductor damage.
- Lower jaw is serrated to firmly grip insulated cables and conductors.
- Design includes a latch that prevents the grip from falling in case of jaw disengagement from the cable.
- Large-diameter eye accommodates large hooks on hoists, winches and tackle blocks.

Hot-Line Grips for Bare Conductors

- Hot-line grips for both bare and insulated conductors.
- Grip may be placed on wire with hot-line stick.
- When stick is removed, latch closes automatically to guard against grip accidentally disengaging from wire.
- Standard hot-line grips are not supplied with springs or lock-open features.
- When springs or lock-open features are desired, add prefix letter "S" before catalog number.

Curved-Jaw Grip for EHS Cable

- When pulling EHS (extra-high-strength) galvanized-steel cable, the galvanizing has a tendency to coat the jaws of any grip, causing the cable to slip.
- To reduce the possibility of slippage and damage to the cable, the jaws of this grip are milled on a curve with a double "V" contour

"Type B" Strand Puller

- Similar to Bell-System type "B" strand puller.
- Designed to pull 1/4" figure-8 telephone cable.
- Serpentine grooves grip insulation on strand, preventing slippage.
- Equipped with chain, toggle, and shackle.

Parallel-Jaw Grips

- Longer jaws achieve a firm hold, reducing possibility of slippage and damage to cable.
- Design includes a latch, plus a large-diameter eye that accommodates large hooks on hoists, winches and tackle blocks.
- When latch is closed, it helps maintain cable position in grip jaws.

Lewis Sealed Ball Bearing Directional Boring Swivel

Lewis Sealed Ball Bearing Directional Boring Swivels prevent equipment's rotational torque from interfering with the product being pulled. In a typical boring application, the swivel is attached behind the reamer head and to the pipe or cable being pulled through the bore. Permanently sealed to keep contaminants out, they never require lubrication.

JL-R-Series Grips

The JL-R series is designed to be used in secondary light duty cable pulls. The neoprene cone at the front of the grip helps the grip and cable go around the tightest bends easily and smoothly. If installed properly, the cone can also help eliminate possible cable lubricant migration by sealing off the end of the cable during a pull.

XS-JL-125-R	1 - 1-1/2	4,500	2250	5-1/2	13

Warning:

- (1) Make a complete inspection of swivel before each use.
- (2) See that end pins match up properly and allen screw is in place.
- (3) Rotate swivel by hand to determine proper operation of bearings.
- (4) Test complete swivel frequently.
- (5) Do not alter or modify unit.

Swivel Eye Grips

The SEG Series are available with hardened steel rotating eyes. These eyes are durable, compact, and streamlined and will thread through blocks and sheaves without binding.

The rotating eye is not a ball bearing swivel and will not turn while under tension. It will turn to relieve pulling torque when the pulling tension is released. If a continual swivel movement is needed, a ball bearing swivel should be used.

Reference swivel usages per following 1-3 explanations:

1. HD series for overhead and high tension underground.
2. W series for standard underground pulling.
3. HD-S series when a high tension environment is anticipated, coupled with a need for a sealed swivel: ie. directional boring applications.

In addition, the SEG series can be customized to meet customer specifications. We offer the following options:

- A. Special mesh lengths. When a customer would like a different mesh length than the one specified on the SEG chart.
- B. Mesh available in three different types of wire for varying applications and environments: 1. Galvanized (standard) 2. Plastic coated galvanized 3. Stainless

All inquiries on custom made grips are given our prompt attention.

Flex-Eye Heavy Duty Grip

Here is a powerful grip for pulling big conductors and it will travel smoothly through pulleys. It is made of highest quality, flexible aircraft strand steel, integrated with a new flexible eye. The eye itself is composed of braided strands (rather than being rigid) to give it maximum flexibility in going around angle pulls or through small openings. Strands of the grip are retained at the head by a stainless steel spring, eliminating a rigid compression sleeve.

Lewis Snake Grips

The Lewis Snake Grip expands or contracts to grip different or identical cable and/or rope sizes as per the customer's needs. SAVE time stringing up, changing and unstringing because the snake requires no special tools. The swivel and swing link go smoothly through blocks and prevent line twisting. INSTALL new cable by using old existing cable as pulling line. Always seize the ends of the grips by banding or taping.

Split Pulling Grips

Rod and Lace Closing

Lewis Split Grips - both rod and lace closing - are designed for all phases of suspension or pulling, where neither end of the conductor is available and "middle of the run" application of the grip is desired. Head variations are "DLE" (pictured), "SE" or "U". Please specify head desired. Working loads, as listed in the table below, are maximum holding power for the smallest conductor in each size range.

PULLING GRIPS:

Model OH

Four Standard Sizes: 1/4" - 1/2"; 3/0-.336 M.C.M.; .477-.795 M.C.M.; .795-1.000 M.C.M.

Model OH Pulling Grips, designed for the special demands of overhead stringing crews, has a basket constructed of triple woven nylon coated Aircraft Strand for maximum abrasive resistance. It has special tough plastic boots at eye-end to prevent abrasion between the conductor and pulling dollies. A steel thimble is manufactured into the eye, and is furnished without swivel or steel thimble on request. It is easily adaptable to Lewis ball bearing swivels. Uncoated wire gives approximately 20% more strength. Please specify when ordering.

Heavy Duty Split Grips

Models S-1, S-2, S-3 and S-4

Split Grips are specially designed to pull or support wire or cable already in place. They are manufactured of Hi-Fatigue Aircraft Strand steel cable with abrasive resistant plastic coating. All Split Grips are closed with plastic coated stainless steel flexible lacing cable.

Ring & Conduit Riser Grips

Conduit Riser Ring Grips are specially designed to suspend conductor by using the conduit as a means of support. With the conductor approximately one-half inch above the "in place" position, the grip is slipped into position and seats on the conduit edge, thus completing the installation. Ring size permits conduit couplings to be used. The ring and its components are constructed of solder dipped cast bronze. Spring pins mounted in the cast ring provide proper spacing between conduit and grip mesh. The plastic coated Aircraft Strand cable - plus the flexibility of design - permits a maximum of line surge without conductor damage. Patent Nos. 3,216,682 and 3,399,853. Foreign and other patents pending.

Conduit Ring Grip Reducer Bushings make it possible for a small grip to be used with a large conduit until an increase in service is desired - at which time the small grip and bushing are extended for further use, while a larger grip is installed for the increased service. Patent Nos. 3,216,682 and 3,399,853. Foreign and other patents pending.

Ball Bearing Swivels, Links, Swivel Toggles

Lewis Ball Bearing Swivels

Either "W" Series (Regular Duty) or "HD" Series (Heavy Duty) are specifically designed for tension stringing, and assure that conductor will remain in neutral position during stringing of transmission and distribution lines. These twin race ball bearing swivels are manufactured from high-grade pre-stressed steel. Proper placement of thrust and radial bearing allow thrust and shock loads to be absorbed without affecting rotation of swivel. Pins are screwdriver removable.

The above pictured ball-bearing swivel is available in Models W-1, W-2, W-3 and W-4. They are different sizes, specifications and ratings but they have the same basic design.

Swivel Toggle (TW Series).

A toggle used in conjunction with our ball bearing swivel. Provides a 90° "break-over" when pulling through angle structures or sharp bends in conduit.

Swing Links

Drop forged steel swing links are fabricated from the same high quality steel as Lewis swivels. They are used for adapting swivels to Lewis grips and/or winch lines. They are available in sizes from 1/4-inch to 1/2-inch; other sizes will be furnished on request.

Closed Open

STANDARD FIBER OPTICS PULLING GRIPS:

Closed Mesh

This Lewis grip is especially designed for long pulls. It features a continuous single weave design that provides an even pull from the receiving end through the pulling eye.

The grip is fabricated of coated galvanized aircraft strand for long life and safety. Each grip has a 24" mesh length for maximum gripping surface.

Part No.	M (in)	E (in)	Grip Size (in)	Working Load (lb)	Break Strength (lb)
JL-25-FO-CM	24	8	1/4 - 3/8	600	1200

JL-75-FO-CM	24	8	3/4 - 1	900	1800
JL-100-FO-CM	24	8	1 - 1-1/4	900	1800

Split Lace

The Lewis grip has the same long-life easy pulling characteristics as the closed mesh grip but is for use in any phase of suspension or pulling when a conductor end is not available. This grip can also be used for "middle of the run" applications. The lacing is made of coated, steel flexible lacing cable.

JL-100-FO-SL	24	8	1 - 1-1/4	900	1800

Split Rod

Use this Lewis grip, as you would the Split Lace Grip, for "middle of the run" applications or when neither end of the conductor is available. Same 24" mesh length for maximum gripping surface, same continuous single weave through the eye for even pulling tension. The rod and eyelets are made of Hi-Strength steel for durable service.

FIBER OPTICS SUPPORT GRIPS:

Split Lace

Use this grip for final adjustments and retensioning or to support or suspend wire. Patented, flexible pulling eye tends to equalize radial loads. Galvanized steel construction.

Multi-Purpose X-Series Pulling Grips

Can be used for overhead or underground cable or wire rope pulling applications and for vibratory plows and directional drilling pull back operations.

The XS, X, and X-HDFE were designed to simplify the process of selecting a pulling grip. The entire X series is unique for several reasons:

- X Model grips can be used overhead or for underground pulls.
- X Model grips incorporate a single wire bail which, when put under pressure, conforms to even the tightest clearances. The single wire bail also connects easily with either ball bearing swivels or drop forged friction swivels.

Lewis®

Multi-Purpose X-Series Pulling Grips (continued)

- The reverse weave of all X Models insures that the grip and cable will pass smoothly through even the tightest blocks, sheaves, bullwheels, etc.
- The X and X Heavy Duty features metal shoulders installed beneath the bail. These shoulders allow the grip to be pulled through the most abrasive conduit or other rough environments, and still be used time after time. These shoulders are color coded to ensure the correct grip size is selected when making a pull.

NOTE: When a friction swivel is needed for the X-Series Pulling Grip or any other Lewis Pulling Grip, please refer to the following chart. To order a swivel built into a grip, add "W/S" to the end of the grip part number.

X or XS Models	Swivel Size	X or XS Models	Swivel Size
A	5/16	F	3/8
B	3/8	G	1/2
C	3/8	H	1/2
D	3/8	I	1/2
E	3/8	J	1/2

X-Series Grips

The X-Series Grips are color coded for quick identification and organized storage. They are plastic coated which increases the life of the grip, provides a more effective gripping surface, and reduces injuries due to frayed or mangled wire in the pulling grip itself. This grip is designed with the ball bearing swivel user in mind. The single wire eye allows a swivel to be attached to the grip easily, and helps to alleviate any binding that may occur in the throat of the swivel during a pull.

The X model grip also offers a backwards weave that (1) adds pulling surface to the grip itself, and (2) allows the grip to pass through even the tightest of clearances. The X series features metal sleeves near the top of the grip to eliminate wear when pulling through clay conduit, gravel, or other abrasive pulling environments. This series is constructed with galvanized wire, but can be ordered with stainless steel at additional cost.

Heavy-Duty X Model Grips

These grips are designed for large work loads and rugged conditions. The following heavy duty X models incorporate the use of exceptionally strong mesh, reverse weave, single wire bail and abrasion-resistant metal shoulders. Heavy Duty X models are constructed of uncoated aircraft strand galvanized wire.

Special Application Suspension Grips

Hook Bail Grip

The Hook Bail series is used when a connection cannot be made with a U-Bail. The hook bail series is also available in split lace or split rod.

If a Split Grip is needed, add the following to the end of the part number: "SL" for Split Lace Closing or "SR" for Split Rod Closing.

For a Stainless Steel mesh add "SS" to the end of the part number.

Offset Eye Grip

The Offset Eye series is most commonly used in cable placement applications. Use the OE series when a DLE, U, or HB model is unsuitable. The offset eye may also be used as a suspension grip.

If a Split Mesh grip is needed, add the following to the end of the part number: "SL" for Split Lace closure or "SR" for Split Rod closure.

Add "SS" to the end of the part number if Stainless Steel Mesh is desired.

Lewis Riser Hook Ball Grip

This series of grips is designed to permanently support cable in conduit. Special hooked ends hook over conduit, eliminating the need for a bushing. The LRHB series is available in split lace or split rod configurations.

For Split Lace, add "SL" to the end of the part number. For Split Rod, add "SR". Split grips are used when ends of cable are not available.

Impact Type Wire Rope Cutters

MO-ST® Models 1, 1A & 2

The impact type wire rope cutters are the original portable tools invented by Morse-Starrett to cut wire rope. The cutters are actuated by striking with a hammer, they are easy to operate and do a superior cutting job with only a few blows of a hammer. These cutters are precision engineered to deliver a cut without affecting the original roundness of the wire rope. The blades and dies are made of the finest tool steel available, heat treated and ground to close tolerances.

Model No.	Description	Cap. (in)	Wt. (lbs)
1	Light Duty	3/4	8
1A	Heavy Duty	1-1/16	17
2	Extra Heavy Duty	1-1/2	28

Manually Operated Hydraulic Wire Rope Cutters

Hydrashear® Models W, P & C

The self-contained hydraulic cable cutter is a precision engineered tool designed to give a clean cut with minimum effort. Just pump the handle... no outside power is required. This self-contained portable tool can be easily carried and is used by contractors, rigging lofts and elevator repairmen. All three models will operate underwater. The Pell Hydrashear® is recommended by wire rope manufacturers and used by industries throughout the world. The blades and die sets are made of the finest tool steel available, heat treated and ground to close tolerances. This means a long life for the blades as well as superior performance. The hydraulic cutters are available in three sizes and capacities. The Model W has a 3/4" capacity, the Model P, a 1-1/8" capacity and the Model C has a 1-3/4" capacity.

Shop Floor Clamps

- Forged sliding arm is made from tempered. Drop-forged steel for long service life.
- High-strength electro-galvanized sliding pin T-handle - rounded ends for comfort, size engineered to load capacity
- Heat treated, high carbon Acme threaded screw - tempered and quenched to give greater load capacity with longer service life. Spatter resistant.
- Tommy bar with rounded ends for comfort and simple transfer of force when clamping

Light Duty (MMS)

- Replaceable arms, spindles and MorPads are available for many shop floor steel clamps

Light Duty (660-S, 1200-S)

- Patented rail profile offers more clamp force with fewer spindle turns.
- New u-shaped sliding arm offers straight line power transmission. Great stability.

Medium Duty (SGL) and Regular Duty (SQ)

- Ergonomic grip is available as an accessory

Heavy Duty (STB)

- Tommy bar with rounded ends for comfort and simple transfer of force when clamping
- Comes standard with hex head spindle

Claw Clamp (CL)

- Spindle mechanism can be positioned outside working area for use in confined spaces
- Can be used as a spreader (needs optional CLS shoe)
- A special V-grooved pressure plate is made of high grade cast iron... swivels up to 30°
- Removable end stop to allow the sliding arm to be quickly turned around for spreading (needs optional CLS Shoe)

INDUSTRIAL & WELDERS' MAGNETS:

Multi-Purpose Magnetic Squares

- Quality magnets for fast, simple set-ups
- Flexibility - Often referred to as "an extra set of hands"
- Variety - The wide variety of BESSEY® industrial magnets will offer most metal workers an option that fits their needs
- Simple magnet holds work at set angle
- Double magnets are joined at a pivot point and can hold work at any angle
- Quality magnetic multi-angle square for fast, simple set-up

BEARING HEATERS & ACCESSORIES

Reco Induction Bearing Heaters

- Extend bearing life and cut operating cost by eliminating hammering and pounding to cold-mount bearings
- Works on bearings, sprockets, gears, couplings, sleeves
- Reduces risk to operator from flames, torches or oil baths
- Demagnetizes bearings – easy to use, ready in minutes

Model SC110D (110V or 220V)

- Bearing capacity: 4" x 11" O.D. (14"OD with optional raising blocks)
- Computer chip monitors and stabilizes temperature
- Display panel (pre-set times, temperatures) & auto shut off

Model SC110V (110V or 220V)

- Bearing capacity: 4" x 11" O.D. (14"OD with optional raising blocks)

Nicopress

No. 17-BA Nicopress Tool

1/32" oval sleeves & stop sleeves can be pressed with this tool. Light weight and low cost, this handy field tool can be used with small diameter steel aircraft cable. Use the 17-BA tool to press Nicopress part Numbers 17-1-B & 27-1-B oval sleeves & the 871-32-B stop sleeve.

Tool Length 8-1/4"

Shipping Weight 3/4 lbs.

Important: Make two presses per sleeve.

No. 17-B4 Nicopress Tool

This tool used to press 3/64" oval sleeves onto steel aircraft cable. The 17-B4 tool will reach confined spaces which larger tools cannot. Use this tool to press Nicopress Part Numbers 18-11-B4, 28-11-B4, & 428-1.5-VB4 oval sleeves.

Tool Length 8-1/4"

Shipping Weight 3/4 lbs.

Important: Make three presses per sleeve.

No. 32-VC: VG Tool

A small hand tool with two sleeve-pressing grooves in the head. It is used for splicing with Nicopress Oval & Stop Sleeves having "C" or "G" letters in their stock Numbers.

Tool Length 11-1/2"

Shipping Weight 2-1/2 lbs.

No. 51 Tools

Each tool has a single sleeve-pressing groove in the head. Range accommodated - 3/64" through 7/32"

Tool Length 18-1/4"

Shipping Weight 5-1/4 lbs.

Type Nos. 63 & 64 Tools

These are multiple sleeve-pressing groove hand tools. The No. 63V-XPMP has three grooves & is used only with Oval Sleeves. For cable sizes 1/8", 5/32" & 3/16".

The No.64-CGMP has four grooves & is used for Oval Sleeves in the range of cable sizes from 1/16" through 5/32". The "C" groove is also used for the No. 871-1-C Stop Sleeve.

Tool Length 20"

Shipping Weight 6 lbs.

No. 51 Tools for Stop Sleeves

The No. 51-MJ hand tool with two sleeve-pressing grooves is used for all M & J lettered Nicopress Stop Sleeves for cable sizes 3/32" through 7/32". The "M" groove of this tool can also be used for the No. 18-3-M & No. 28-3-M Oval Sleeves.

The No. 51-Q-929 single-groove tool is used for galvanized steel Stop Sleeves No. 871-1-Q & No. 871-3-Q.

Tool Length 18-3/4"

Shipping Weight 5-1/4 lbs.

Hand Tools

Nicopress/OZAT

No. 3 Nicopress Tool

These hand tools have single sleeve pressing groove heads which are available in the following styles.

- No. 3-F6-950 – For Oval & Stop Sleeves having "F6" as part of their Stock Numbers.
- No. 3-F2-950 – For oval sleeves having "F2" as a part of their Stock Numbers.
- No. 3-G9-950 – For No. 18-13-G9 and No. 28-13-G9 Oval Sleeves for 5/16" cable.

Tool Length 33"

Shipping Weight 14-1/4 lbs.

Hydraulic Tool No. 635

Larger Nicopress sleeves require great pressing effort & the No. 635 Hydraulic Tool is made for this purpose. Use the No. 635 Hydraulic Tool to press the larger Nicopress oval sleeves and stop sleeves.

We manufacture 635 tool dies to press Nicopress sleeve sizes 3/64" thru 5/8". For other sizes, please contact a sales rep. with your exact requirements.

ATP maintains "in stock" one of the broadest ranges of 1" drive sockets available to industry. OZAT 1" drive sizes are equally well suited for construction, maintenance, and heavy assembly application, as well as for precision bolting with hydraulic bolting equipment.

OZAT's exclusive electro chemical machining process, (ECM) produces a far stronger socket than one manufactured by conventional machining or broaching methods. The exceptional strength of the OZAT-1-1/2" drive sockets often makes them the preferred choice of hydraulic bolting specialists. Speciality sockets for the precision bolting market are available from ATP.

Internal Slide Hammer Set - PM16

POSI LOCK's PM16 is ideal for the removal of many tough internal pulling jobs such as crankshaft pilot bearings, bearing cups, needle bearings, bushings, seal and grease retainers. Tool board and accessories are included. Create an external slide hammer puller by coupling POSI LOCK's model 104 or 204 with the slide rod 2.5 lb. hammer or 5 lb. hammer (10563).

Transmission Bearing Puller TJ-1

Transmission bearing removal takes minutes... not hours when you add POSI LOCK's transmission jaws (11054T) to the model 208 puller creating our TJ-1 puller. Jaws clamp in snap ring grooves as narrow as .070" to allow removal of front input shaft bearings on 1955-present 3 speed, 4 speed, 5 speed, 3 speed overdrive and 4 speed overdrive manual transmissions on rear wheel drive foreign and domestic cars, trucks and vans.

The 208 and 210 pullers with their standard jaws are used on front wheel drive vehicles (Chrysler, Ford, foreign, etc.) to remove front drive hubs (for CV joint replacement) and hanger bearings as well as numerous other applications on any vehicle. The cage® control design makes these pullers safe and easy to use.

No. 226 In-Place Soil Pipe Cutter

The RIDGID 226 In-Place Soil Pipe Cutter is a compact, light-weight tool designed to cut hub and no-hub soil pipe in tight quarters. Only 17" long, it is perfect for cutting cast iron, concrete and clay pipe where space is limited. It is especially suited for against-the-wall and other tight quarter applications. From the Model 226's compact design to its unique chain latching mechanism, every feature has been engineered for maximum versatility.

RIDGID

Quick-Acting Tubing Cutters

The RIDGID® TC-40 Powered Plastic Pipe and Tube Cutter is a battery powered, fully automatic tool intended for cutting polyethylene (PE), polypropylene (PP), PEX, rubber hose, PVC and CPVC with a capacity up to 1-5/8" outer diameter.

Model PC-1375 Single Stroke Plastic Pipe and Tubing Cutter uses a X-CEL® blade to ensure optimum mechanical advantage throughout the cut stroke. The X-CEL blade allows fast, single stroke cutting of PVC, CPVC, PEX, PE, PB and rubber hose up to 1.375" outside diameter.

Model PC-1250 Scissor-Style Cutter is an easy-to-use tool that can cut all types of plastic or rubber tube and pipe up to 15/8" outside diameter.

Model RC-1625's advanced blade design combined with the ratcheting mechanism, work together to reduce the amount of hand force needed to cut through hard plastic material. A quick-change blade pin enables the user to change blades in a matter of seconds without tools, saving valuable time and increasing productivity. This pin also assures that there will be no lost clips or misplaced screws during a blade change.

RIDGID

POWER THREADING EQUIPMENT:

Model 700 Power Drive

- Heavy-duty hand-held power drive
- Features reversible 115V or 230V Universal motor
- Capacity 1/8" - 2" pipe. Designed for RIDGID No. 12R die heads. Other RIDGID die heads (OOR, OORB, 11R) using adapters, threading 2-1/2" through 6" with 141/161 geared threaders
- CSA approved
- Approved to UL standards (NRTLTC)

Technical Specifications:

- **Motor:** Universal, 1/2 HP, 115V or 230V 50/60 Hz
- **Switch:** Double-throw reversible
- **Gear Head:** All-spur gear reduction. Spring loaded adapter pawl. Hardened steel spindle gear
- **Body:** Cast aluminum
- **Spindle Speed:** 26-32 RPM (no load)
- **Capacity:** 1/8" - 2" Pipe. 1/4" - 1" Bolt (using OO-RB)
- **Weight:** 25 lbs. Power Drive only
- **Length:** 28-1/4"

Note: No. 12-R Die Heads Complete uses No. 12R Dies. Use the No. 775 Support Arm to resist the torque developed when threading larger pipe.

Thread Cutting Oil

- Cools threads and pipe during operation
- Speeds metal removal
- Improves thread quality
- Reduces threading torque

RIDGID thread cutting oils are free of chlorine and other halogens, PCBs and heavy metals. Complete material safety data sheet available.

Dark Oil - Traditional mineral oil with low odor and anti-mist formulation.

Nu-Clear Oil - Clear mineral oil with low odor and anti-mist formulation. Special low temperature properties maintain workable viscosity to -20°F.

Extreme Performance Oil - High performance mineral oil formulated to produce superior quality threads on stainless steel and black pipe.

Endura-Clear™ - Specially formulated to maximize wear resistance which increases die life up to 60% and significantly cuts operating costs up to 30% over Nu-Clear.
