600 Series Instrument Tubing Bender

The RIDGID® 600 Series Lever Benders are specially designed for bending hard tubing such as stainless steel, steel and titanium. A simple two-stage handle design easily switches to bend up to 180°, keeping bends in-plane and accurate.

- In-Plane: Two-stage design allows bends from 90° to 180° without ever crossing handles; lock/unlock with a half-turn rotation of the bending handle.
- Accurate: Roll dies in bending carriage reduce tube flattening (ovality). Gain marks on front of form ensure properly aligned bending angles.
- Reduced Force: Extra-long handles for increased leverage; vise clamp block for extra stability.
- Ergonomic: Cushioned handle grips for improved bending ease.

SF-2500 Pipe Freezer

SuperFreeze® Pipe Freezing Tool Avoids the Cost and Inconvenience of a System Shutdown and Purge.

The SuperFreeze Pipe Freezer is an easy-to-use pipe freezing unit that allows the contractor to keep water systems operating while making repairs. The RIDGID SF-2500 is a mini-refrigeration unit that circulates self-contained refrigerant to its aluminum freeze heads. This forms an ice plug in as little as 6 minutes in 1/2" copper tube and can be used with up to 2 1/2" tube or 2" pipe. Once the pipe is plugged, repairs can be made while the ice plug is maintained by the unit. Now includes a bottle of specially formulated freeze gel to speed freezing. Apply the gel to freeze heads before placing on pipe.

Models KT-190 and KT-200 Pipe Thawers

For fast thawing of frozen metal pipes 1/2" through 1 1/2" (12-36mm). The KT-190 and KT-200 Pipe Thawing Units provide continuous heating to quickly thaw 1/2" to 1 1/2" frozen metal pipes. With these lightweight, versatile units, there is no need to dig or tear apart walls. Simply attach the clamps to the metal pipe on each side of the frozen section and the pipe is thawed within minutes.

- Approved by CSA to CSA and UL standards (115V only).
- Continuous Operation: The KT-190 and KT-200 operate continuously without requiring any "cool-down" periods. There is no tripping of the unit or need to turn the unit off during the thawing process. Simply attach the cables to the pipe, turn the unit on and let it do its job - continuously from start to finish.
- Lightweight: Weighing under 30 lbs., each unit can be easily transported to the most difficult locations such as attics.
- Versatile: The KT-190 can be used on lengths of pipe between 15 and 75 feet. With 4 output levels, the KT-200 can be used on 4' to 150' lengths of pipe. The KT-200's amp meter allows the user to select the proper output level for maximum current draw and minimum thawing time.
- Powerful: Both units operate on a standard 115V, 15 amp outlet. The KT-190 produces 300 amps and the KT-200 produces 250-400 amps of thawing power.
- All these features and more make the KT-190 and the KT-200 the professional's choice.

ST-33Q Line Transmitter

- Distance: Induce over 8 times more current than the competition onto a target line. More current means that you can walk and trace further than ever before.
- Versatility: Induces at 8 kHz and 33 kHz for low distortion locates. In direct connect mode, the SeekTech ST-33Q can transmit at any frequency between 10 Hz and 490,000 Hz making the RIDGID SeekTech ST-33Q one transmitter than can be used with all receivers.

- Speed: More signal equals less retracing of your steps to pick up and move the transmitter. Cut your inductive trace steps in half, by only having to set up the ST-33Q once. In direct connect mode, the LCD display gives instant feedback on current flow and line resistance.
- Accuracy: Induce more current at lower frequencies. Lower frequencies are less prone to jump onto other lines in congested areas reducing distortion and increasing accuracy.
- Confidence: More current on your line means more signal to locate. Combine your experience with the information provided by RIDGID Locators and you have the tools that allow you to work through difficult traces with confidence.

Model K-400 - For 1-1/2" to 4" Drain Lines

The K-400 offers several unique, user-friendly features to make the toughest drain cleaning jobs easier and hassle-free. Designed with a sleek profile, the K-400 is a great fit for drain cleaners, service plumbers, facility and institutional maintenance departments and property management companies.

Features

- Integrated Transport Cart – allows for easy movement to and from the job site. Heavy-duty, over-molded rubber wheels easily navigate over bumps and up stairs.
- Integrated Telescoping Handle – provides high-handle height during transport. Handle locks in low position during drain cleaning operation or during transport to minimize space requirements.
- Cable Control System – causes the drum to stop spinning when the blade becomes lodged in a blockage, limits potential for cable to flip over in the drum and helps to indicate to operator when blockages are encountered.
- "Solid Core" Cable – uses tough 3/8" or 1/2" Integral Wound (IW) solid core cable that is rugged and kink resistant. Each size comes in several lengths and utilizes a variety of the RIDGID quick-connect cutters.
- AUTOFEED® – offered as an accessory, this patented, automatic cable feed powers cable in and out of the drain. Reverse the direction of the AUTOFEED and the cable feeds back into the drum.

Water Jetters:

Model KJ-1350 & KJ-1750 Jets 1-1/4" - 4" Drain Lines

These jetters propel a highly flexible hose through 1-1/4" to 4" lines - blasting through sludge, soap, and grease blockages. As you pull the hose back, it power scrubs the line, flushing debris away and restoring drain lines to their free flowing capacity.

- **Easy to use:** Thrust propels the hose down the line. You simply guide the hose into the drain.
- **High Quality:** Duplex pump with corrosion resistant, forged, brass head. New pressure control valve allows quick and easy pressure adjustment.
- **Dependable:** Reduced number of fittings, hoses, and parts minimizes leaks and down time - keeping you on the job.
- **Versatile:** Optional power washer package cleans cables, tools and other heavily soiled equipment.

KJ-1350 Water Jetter

- **Powerful:** Actual working pressure of 1350 psi and flow of 1.4 GPM for fast, effective cleaning of lines.
- **Pulse Action:** Activate the KJ-1350's pulse action to easily negotiate difficult bends and traps. The KJ-1350-2 has a second level of pulse.
- **Portable and Compact:** The optional H-10 Cart rolls the jetter and hose to the job site. Jetter and hose reel are easily removed from the cart in seconds for hard to reach drains or remote storage. The compact cart offers a retractable handle and swivel hose reel minimizing storage space. Optional adapter allows the KJ-1350 to be mounted on the upright H-30 Cart.
- **Electrical Requirement:** The 1.5 hp motor draws a maximum of 14 amps and can run on most standard 115-volt circuits.

KJ-1750 Water Jetter

- **Powerful:** Actual working pressure of 1750 psi and flow of 1.4 GPM for fast effective cleaning of lines.
- **Pulse Action:** Two levels of pulse are standard. Activate the KJ-1750's pulse action to easily negotiate difficult bends and traps.
- **Portable:** The optional H-30 Cart rolls the jetter and hose to the job site. The jetter is easily removed from the cart in seconds for hard to reach drain or for remote storage. Optional adapter allows the KJ-1750 to be mounted on the compact H-10 Cart.
- **Electrical Requirement:** The 2.0 hp motor draws a maximum of 17 amps which requires a 20 amp, 115-volt circuit.

Combination Wrenches

Combination Wrenches, Chrome Satin Finish, Standard Length, 12 Point

- SUPERTORQUE® box opening design allows application of higher torque without rounding or deforming hex fastener points. No contact is made at the corners. Instead, wrenching forces are placed on the flat surfaces behind the points.
- Meets or exceeds aerospace specification AS 954 for 12 point fasteners (as defined by AS 870) to provide accurate torque/tension relationship for precision application.
- May be used on all common hex (6 point) fasteners with considerable advantage over conventional box end wrenches to increase both hand tool flexibility and economy.
- Williams Satin Chrome Finish openings start with 1/4" and go all the way up to 3-1/2" - the most comprehensive range in the industry.
- Box and open end openings are identical.

Adjustable Wrenches

Adjustable Wrenches, Cobalt Finish

- Cobalt finish has over twice the rust protection in both salt fog and water fog environments without the environmentally hazardous components of chrome/nickel protection.
- Will not chip or peel as chrome/nickel finishes will.
- Cobalt finish process coats more completely, uniformly, efficiently and with less electricity, further adding to its environmental appeal.

C-Clamps

Heavy Service C-Clamps

Fed. Spec.: GGG-C-406D

Especially designed for heavy duty service, frames are drop-forged and heat-treated for maximum strength and reduced "springing". Screws are made of special grade steel and are heat-treated for added strength not found in case hardened screws. To tighten, the square headed screw must be turned with a wrench. Where zero capacity is desired, clamps should be ordered with long screws.

- Ideal for the most demanding applications such as construction and heavy industry.
- Square head screw allows tightening with wrench for extra heavy duty clamping requirements.
- Greater anvil surface for gripping larger work pieces and for greater stability.

Special 8-Pt. Combination Sockets for Both Square Fasteners & Hex Fasteners

This exclusively designed socket is the only one for use on both SQUARE & HEX fasteners. Competitor designs look similar & can turn square nuts but NOT both. There is no need to buy 2 sockets of any particular size when ONE will do the job.

Wright's SPECIAL 8 PT. design is the only socket that fits both types of nuts interchangeably.

These DUAL purpose sockets provide full bearing & snug fit on both square & hex fasteners. A set of Wright's SPECIAL 8 PT. sockets should be added to every set of tools.

One Socket Drive Both Square and Hex Nuts or Same Size

BLACK Adjustable Wrenches

BLACK adjustable wrenches are very versatile tools, since the size of their opening can be changed by opening or closing a movable jaw using an adjustable toothed bar system. This makes it possible to tighten or loosen almost any type of fastener.

When using an adjustable wrench, it is recommended that the force always be applied by pulling and not pushing, so that the load is always on the fixed jaw of the wrench.

Their BLACK finish protects them against corrosion and eliminates the risk of releasing small chromium particles.

Torque Multipliers with Handles

- Provides the operator with nut-turning power that requires only a fraction of the force required when using conventional tools.
- Input and output rotation is in the same direction.
- Reaction bar rotation is opposite to input direction and must rest securely against a rigid object to withstand the generated reaction force.
- By removing 4 screws, heads may be easily disassembled for inspection, cleaning and lubrication.

Torque Multiplier with Planetary-Gear Mechanism

- Designed where high torques are necessary for fastening or breaking out stubborn fasteners.
- Allows operator safe and easy means of producing torque for job requirements.
- Precision planetary gear multiplies the operator's input from standard torque wrenches.
- Can also multiply the torque from air-driven (non-impact) wrenches.
